APPENDIX "C" - Audit Committee Terms of Reference	C-1

ABBREVIATIONS AND CONVERSION

In this Annual Information Form, the following abbreviations have the meanings set forth below.

Oil and Natural Gas Liquids

bbl	barrel
Mbbl	thousand barrels
bbl/d	barrel per day
NGL	natural gas liquids

Natural Gas

Mcf	thousand cubic feet
MMcf	million cubic feet
Mcf/d	thousand cubic feet per day
MMcf/d	Million cubic feet per day
MMBtu	million British Thermal Units
Bcf	billion cubic feet

Other

AECO	a natural gas storage facility located at Suffield, Alberta
API	American Petroleum Institute
°API	an indication of the specific gravity of crude oil measured on the API gravity scale. Liquid petroleum with a specified gravity of 28°API or higher is generally referred to as light crude oil
BOE	barrel of oil equivalent on the basis of 1 BOE to 6 Mcf of natural gas. BOEs may be misleading, particularly if used in isolation. A BOE conversion ratio of 1 BOE for 6 Mcf is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead
BOE/d	barrel of oil equivalent per day
M\$	thousands of dollars
MM\$	millions of dollars
WTI	West Texas Intermediate, the reference price paid in U.S. dollars at Cushing, Oklahoma for crude oil of standard grade

The following table sets forth certain standard conversions between Standard Imperial Units and the International System of Units (or metric units)

<u>To convert from</u>	<u>To</u>	<u>Multiply by</u>
Mcf	1,000 cubic metres of gas	0.028
1,000 cubic metres of gas	Mcf	35.493
bbl	cubic metres of oil	0.158
cubic metres of oil	Bbl	6.290
feet	Metres	0.305
metres	Feet	3.281
miles	Kilometres	1.609
kilometres	Miles	0.621
acres	Hectares	0.405
hectares	Acres	2.471

PRESENTATION OF OIL AND GAS RESERVES AND PRODUCTION INFORMATION

All oil and natural gas reserves information contained in this Annual Information Form has been prepared and presented in accordance with National Instrument 51-101—*Standards of Disclosure for Oil and Gas Activities* ("NI 51-101"). Certain terms used in this Annual Information Form and the Appendices attached hereto but not otherwise defined in the Glossary of Terms are defined in NI 51-101 and, unless the context requires otherwise, shall have the same meanings herein as in NI 51-101. Actual oil and natural gas reserves and future production may be greater than or less than the estimates provided in this Annual Information Form. The estimated future net revenue from the production of the disclosed oil and natural gas reserves does not represent the fair market value of these reserves. The Company has adopted the standard of 6 Mcf:1 BOE when converting natural gas to barrels of oil equivalent. A BOE conversion ratio of 6 Mcf:1 BOE is based on an energy equivalency conversion method primarily applicable at the burner tip and does not represent a value equivalency at the wellhead. Boes may be misleading as an indication of value, particularly given that the value ratio based on the current price of crude oil as compared to natural gas is significantly different from the energy equivalency of 6:1.

For fiscal 2014, the ratio between the average price of West Texas Intermediate ("WTI") crude oil at Cushing and New York Mercantile Exchange ("NYMEX") natural gas was approximately 22:1 ("Value Ratio"). The Value Ratio is obtained using the 2014 WTI average price of \$93.03 (US\$/Bbl) for crude oil and the 2014 NYMEX average price of \$4.26 (US\$/MMbtu) for natural gas. This Value Ratio is significantly different from the energy equivalency ratio of 6:1 and using a 6:1 ratio would be misleading as an indication of value.

DEFINITIONS

In this Annual Information Form, the following words and phrases have the meanings set forth below, unless otherwise indicated.

"**ABCA**" means the *Business Corporations Act* (Alberta), together with any or all regulations promulgated thereunder, as amended from time to time.

"**Board**" means the board of directors of the Company.

"**CBM**" means coalbed methane.

"**CEE**" means certain expenditures described in the Tax Act as Canadian exploration expense.

"**CDE**" means certain expenditures described in the Tax Act as Canadian development expense.

"**COGE Handbook**" means the Canadian Oil and Gas Evaluation Handbook prepared jointly by The Society of Petroleum Evaluation Engineers (Calgary Chapter) and the Canadian Institute of Mining, Metallurgy & Petroleum (Petroleum Society), as amended from time to time.

"**Company**" or "**Cequence**" means Cequence Energy Ltd.

"**COP 15**" means the United Nation's Framework Convention on Climate Change 15th session of the Conference of the Parties.

"**crude oil**" or "**oil**" as described in the COGE Handbook means a mixture consisting mainly of pentanes and heavier hydrocarbons that exists in the liquid phase in reservoirs and remains liquid at atmospheric pressure and temperature. Crude oil may contain small amounts of sulphur and other non-hydrocarbons but does not include liquids obtained from the processing of natural gas.

"**development costs**" means costs incurred to obtain access to reserves and to provide facilities for extracting, treating, gathering and storing the oil and natural gas from the reserves. More specifically, development costs, including applicable operating costs of support equipment and facilities and other costs of development activities, are costs incurred to:

- (a) gain access to and prepare well locations for drilling, including surveying and acquiring well locations for the purpose of determining specific development drilling sites, clearing ground, draining, road building, and relocating public roads, gas lines and power lines, to the extent necessary in developing the reserves;
- (b) drill and equip development wells, development type stratigraphic test wells and service wells, including the costs of platforms and of well equipment such as casing, tubing, pumping equipment and the wellhead assembly;
- (c) acquire, construct and install production facilities such as flow lines, separators, treaters, heaters, manifolds, measuring devices and production storage tanks, natural gas cycling and processing plants, and central utility and waste disposal systems; and
- (d) provide improved recovery systems.

"**development well**" means a well drilled inside the established limits of an oil or gas reservoir, or in close proximity to the edge of the reservoir, to the depth of a stratigraphic horizon known to be productive.

"**exploration costs**" means costs incurred in identifying areas that may warrant examination and in examining specific areas that are considered to have prospects that may contain oil and natural gas reserves, including costs of drilling exploratory wells and exploratory type stratigraphic test wells. Exploration costs may be incurred both

before acquiring the related property (sometimes referred to in part as "**prospecting costs**") and after acquiring the property. Exploration costs, which include applicable operating costs of support equipment and facilities and other costs of exploration activities, are:

- (a) costs of topographical, geochemical, geological and geophysical studies, rights of access to properties to conduct those studies, and salaries and other expenses of geologists, geophysical crews and others conducting those studies (collectively sometimes referred to as "geological and geophysical costs");
- (b) costs of carrying and retaining unproved properties, such as delay rentals, taxes (other than income and capital taxes) on properties, legal costs for title defence, and the maintenance of land and lease records;
- (c) dry hole contributions and bottom hole contributions;
- (d) costs of drilling and equipping exploratory wells; and
- (e) costs of drilling exploratory type stratigraphic test wells.

"**exploratory well**" means a well that is not a development well, a service well or a stratigraphic test well.

"**Framework**" means the 'Regulatory Framework for Air Emissions' paper released by the Government of Canada on April 26, 2007.

"**Federal Plan**" means the Framework as amended by the Update.

"**field**" means a defined geographical area consisting of one or more pools.

"**forecast prices and costs**" means future prices and costs that are:

- (a) generally accepted as being a reasonable outlook of the future; and
- (b) if, and only to the extent that, there are fixed or presently determinable future prices or costs to which the Company is legally bound by a contractual or other obligation to supply a physical product, including those for an extension period of a contract that is likely to be extended, those prices or costs rather than the prices and costs referred to in paragraph (a).

"**future income tax expenses**" means future income tax expenses estimated (generally, year-by-year):

- (a) making appropriate allocations of estimated unclaimed costs and losses carried forward for tax purposes, between oil and gas activities and other business activities;
- (b) without deducting estimated future costs (for example, Crown royalties) that are not deductible in computing taxable income;
- (c) taking into account estimated tax credits and allowances (for example, royalty tax credits); and
- (d) applying to the future pre-tax net cash flows relating to the Company's oil and gas activities the appropriate year-end statutory tax rates, taking into account future tax rates already legislated.

"**future net revenue**" means the estimated net amount to be received with respect to the development and production of reserves (including synthetic oil, CBM and other non-conventional reserves) estimated using forecast prices and costs.

"**GHG emissions**" or "**GHGs**" means, collectively, carbon dioxide, methane, nitrous oxide and other emissions.

"**GLJ**" means GLJ Petroleum Consultants Ltd.

"**GLJ Report**" means the independent engineering evaluation of the oil and natural gas reserves attributable to the properties of the Company prepared by GLJ dated March 5, 2015 and effective December 31, 2014.

"**gross**" means:

- (a) in relation to the Company's interest in production or reserves, its "company gross reserves", which are its working interest (operating or non-operating) share before deduction of royalties and without including any royalty interests of the Company;
- (b) in relation to wells, the total number of wells in which the Company has an interest; and
- (c) in relation to properties, the total area of properties in which the Company has an interest.

"**NAFTA**" means the North American Free Trade Agreement among the Governments of Canada, the U.S. and Mexico.

"**natural gas**" as described in the COGE Handbook means a mixture of lighter hydrocarbons that exist either in the gaseous phase or in solution in crude oil in reservoirs but are gaseous at atmospheric conditions. Natural gas may contain sulphur or other non-hydrocarbon compounds.

"**natural gas liquids**" or "**NGL**" as described in the COGE Handbook means those hydrocarbon components that can be recovered from natural gas as liquids including, but not limited to, ethane, propane, butanes, pentanes plus, condensate and small quantities of non-hydrocarbons.

"**NEB**" means the National Energy Board.

"**net**" means

- (a) in relation to the Company's interest in production or reserves its working interest (operating or non-operating) share after deduction of royalty obligations, plus its royalty interests in production or reserves;
- (b) in relation to the Company's interest in wells, the number of wells obtained by aggregating the Company's working interest in each of its gross wells; and
- (c) in relation to the Company's interest in a property, the total area in which the Company has an interest multiplied by the working interest owned by the Company.

"**NI 51-101**" means National Instrument 51-101 - *Standards of Disclosure for Oil and Gas Activities*.

"**Non-Voting Shares**" means the non-voting shares in the capital of the Company.

"**OPEC**" means the Organization of Petroleum Exporting Countries.

"**operating costs**" or "**production costs**" means costs incurred to operate and maintain wells and related equipment and facilities, including applicable operating costs of support equipment and facilities and other costs of operating and maintaining those wells and related equipment and facilities.

"**Option**" means an option to acquire a Share pursuant to the Company's stock option plan.

"**production**" means recovering, gathering, treating, field or plant processing (for example, processing gas to extract natural gas liquids) and field storage of oil and natural gas.

"**property**" includes:

- (a) fee ownership or a lease, concession, agreement, permit, licence or other interest representing the right to extract oil or gas subject to such terms as may be imposed by the conveyance of that interest;
- (b) royalty interests, production payments payable in oil or gas, and other non-operating interests in properties operated by others; and
- (c) an agreement with a foreign government or authority under which a reporting issuer participates in the operation of properties or otherwise serves as "producer" of the underlying reserves (in contrast to being an independent purchaser, broker, dealer or importer).

A property does not include supply agreements, or contracts that represent a right to purchase, rather than extract, oil or gas.

"proved property" means a property or part of a property to which reserves have been specifically attributed.

"reservoir" means a porous and permeable subsurface rock formation that contains a separate accumulation of petroleum that is confined by impermeable rock or water barriers and is characterized by a single pressure system.

"RSU" means a restricted share unit issued pursuant to the Company's Restricted Share Unit Plan dated effective April 28, 2013.

"service well" means a well drilled or completed for the purpose of supporting production in an existing field. Wells in this class are drilled for the following specific purposes: gas injection (natural gas, propane, butane or flue gas), water injection, steam injection, air injection, salt-water disposal, water supply for injection, observation, or injection for combustion.

"Shareholders" means the holders of Shares and **"Shareholder"** means any one of them.

"Shares" means the common shares in the capital of the Company.

"solution gas" means natural gas dissolved in crude oil.

"stratigraphic test well" means a drilling effort, geologically directed, to obtain information pertaining to a specific geologic condition. Ordinarily, such wells are drilled without the intention of being completed for hydrocarbon production. They include wells for the purpose of core tests and all types of expendable holes related to hydrocarbon exploration. Stratigraphic test wells are classified as: (a) "exploratory type" if not drilled into a proved property; or (b) "development type", if drilled into a proved property. Development type stratigraphic wells are also referred to as "evaluation wells".

"support equipment and facilities" means equipment and facilities used in oil and gas activities, including seismic equipment, drilling equipment, construction and grading equipment, vehicles, repair shops, warehouses, supply points, camps, and division, district or field offices.

"Tax Act" means the *Income Tax Act* (Canada), together with any and all of the regulations promulgated thereunder, as amended from time to time.

"TSX" means the Toronto Stock Exchange.

"Update" means the "Turning the Corner: Regulatory Framework for Industrial Greenhouse Gas Emissions" paper released by the Government of Canada on March 10, 2008.

"U.S." or "United States" means the United States of America, its territories and possessions, any state of the United States and the District of Columbia.

"**well abandonment costs**" means costs of abandoning a well (net of salvage value) and of disconnecting the well from the surface gathering system. They do not include costs of abandoning the gathering system or remediating or reclaiming the wellsite.

RESERVES DEFINITIONS

The determination of oil and natural gas reserves involves the preparation of estimates that have an inherent degree of associated uncertainty. Categories of proved, probable and possible reserves have been established to reflect the level of these uncertainties and to provide an indication of the probability of recovery.

The estimation and classification of reserves requires the application of professional judgment combined with geological and engineering knowledge to assess whether or not specific reserves classification criteria have been satisfied. Knowledge of concepts including uncertainty and risk, probability and statistics and deterministic and probabilistic estimation methods is required to properly use and apply reserves definitions.

"**reserves**" are estimated remaining quantities of oil and natural gas and related substances anticipated to be recoverable from known accumulations, from a given date forward, based on: (a) analysis of drilling, geological, geophysical and engineering data; (b) the use of established technology; and (c) specified economic conditions, which are generally accepted as being reasonable and shall be disclosed. Reserves are classified according to the degree of certainty associated with the estimates.

"**proved**" reserves are those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves.

"**probable**" reserves are those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves.

"**developed producing**" reserves are those reserves that are expected to be recovered from completion intervals open at the time of the estimate. These reserves may be currently producing or, if shut-in, they must have previously been on production, and the date of resumption of production must be known with reasonable certainty.

"**developed non-producing**" reserves are those reserves that either have not been on production, or have previously been on production, but are shut-in, and the date of resumption of production is unknown.

"**undeveloped**" reserves are those reserves expected to be recovered from known accumulations where a significant expenditure (e.g., when compared to the cost of drilling a well) is required to render them capable of production. They must fully meet the requirements of the reserves classification (proved, probable, possible) to which they are assigned.

In multi-well pools, it may be appropriate to allocate total pool reserves between the developed and undeveloped categories or to sub-divide the developed reserves for the pool between developed producing and developed non-producing. This allocation should be based on the estimator's assessment as to the reserves that will be recovered from specific wells, facilities and completion intervals in the pool and their respective development and production status.

FORWARD-LOOKING STATEMENTS

This Annual Information Form contains certain forward-looking statements and forward-looking information (collectively referred to as "**forward-looking statements**") within the meaning of applicable Canadian provincial securities legislation. All statements other than statements of historical fact are forward-looking statements. Forward-looking statements are often, but not always, identified by the use of words such as "anticipate", "believe", "could", "estimate", "expect", "forecast", "guidance", "intend", "may", "plan", "predict", "project", "should", "target", "will", or similar words suggesting future outcomes or language suggesting an outlook. In particular, this Annual Information Form contains forward-looking statements pertaining to the following:

- commodity prices;
- the impact and anticipated benefits of acquisitions on Cequence's operations, infrastructure, inventory and opportunities, financial condition, access to capital and overall strategy;
- development and drilling plans for the assets of Cequence and transportation and infrastructure availability;
- the performance characteristics of the oil and natural gas properties of Cequence;
- Cequence's 2015 capital program;
- business plans, strategies and objectives;
- expectations that Cequence will not pay dividends during its current phase of development;
- the ability of Cequence to achieve drilling success consistent with management's expectations;
- quantity of the reserves of Cequence;
- net present values of future net revenues from reserves;
- production levels and mix of the assets of Cequence;
- timing of and bringing on production;
- future production rates;
- expected plans and costs of drilling;
- drilling inventory and presence of oil pools or gas accumulations;
- supply and demand for oil and natural gas;
- ability and cost of increasing plant capacity;
- expected levels of royalty rates, operating costs, general and administrative costs, costs of services and other costs and expenses;
- expectations regarding the ability to raise capital and to continually add to reserves through acquisitions, exploration and development;
- expectations regarding the ability of Cequence to meet its commitments under certain agreements;
- assessments of the value of acquisitions and exploration and development programs;
- geological, technical, drilling and processing problems;
- expectations regarding the payment of income taxes;
- treatment under governmental regulatory regimes and tax laws;
- the impact of the climate change initiatives on operating costs; and
- the impact of Western Canada pipeline constraints.

Statements relating to "reserves" are deemed to be forward-looking statements, as they involve the implied assessment, based on certain estimates and assumptions, that the reserves described exist in the quantities predicted or estimated and can be profitably produced in the future.

Undue reliance should not be placed on forward-looking statements as they are inherently uncertain, are based on estimates and assumptions, and are subject to known and unknown risks and uncertainties (both general and specific) that contribute to the possibility that the future events or circumstances contemplated by the forward-looking statements will not occur. There can be no assurance that the plans, intentions or expectations upon which forward-looking statements are based will in fact be realized. Actual results will differ, and the difference may be material and adverse to Cequence and the Shareholders. Forward-looking statements are provided for the purpose of providing information about management's current expectations and plans relating to the future. Reliance on such information may not be appropriate for other purposes, such as making investment decisions.

Forward-looking statements are based on Cequence's current beliefs as well as assumptions made by, and information currently available to Cequence concerning, among other things, anticipated geological, well and financial performance, business prospects, strategies, any regulatory and tax developments, future commodity prices, future production levels of the assets of Cequence, the ability to obtain equipment, services, supplies and personnel in a timely manner to carry out development activities, the ability to obtain drilling success consistent with expectations, the ability to market oil and natural gas successfully to current and new customers, the impact of increasing competition, the ability to obtain financing on acceptable terms, the ability to add production and reserves through the acquisition and development and exploration activities based on historical cost structures, and that there will be no significant events occurring outside of the normal course of business of Cequence.

Although the management of Cequence considers these assumptions to be reasonable based on information currently available, they may prove to be incorrect.

By their very nature, forward-looking statements involve inherent risks and uncertainties (both general and specific), some of which are beyond the control of Cequence, that such forward-looking statements will not come to pass. These factors include, but are not limited to, risks associated with reservoir performance, oil and gas exploration, financial risks, substantial capital requirements, bank financing, government regulation, environmental matters, prices, markets and marketing, dependence on key personnel, availability of drilling equipment and access thereto, uninsurable risks, management of growth, expiration of licenses and leases, reserves estimates, seasonality, competition from industry players in Cequence's core areas, conflicts of interest, title to properties, variations in exchange rates and hedging and uncertainty in global financial markets. There is also the risk and uncertainty of access to, or expansion of, infrastructure including appropriate pipelines on acceptable terms or costs. See "Risk Factors" in this Annual Information Form.

The success of Cequence's drilling program is a key assumption in the production estimates for the 2015 financial year. The primary risk factors which could lead to Cequence not meeting its drilling targets are a weak natural gas pricing environment, a lack of access to drilling rigs and related equipment on a timely basis and at reasonable prices due to high industry demand, poor weather preventing access to the drill sites, delays in obtaining landowner consent for surface access, and delays in obtaining well licenses and drilling permits. Increases in capital costs from forecast amounts can result from the foregoing reasons as well as general cost inflation in the industry. Additionally, Cequence may choose to decrease capital expenditures based on lower commodity prices than those anticipated in its budget projections, and therefore not meeting its drilling targets and affecting production estimates for the 2015 financial year.

There are many factors that could result in production levels being less than anticipated, including greater than anticipated declines in existing production due to poor reservoir performance, the unanticipated encroachment of water or other fluids into the producing formation, mechanical failures, human error or inability to access production facilities, among other factors.

The price of natural gas in North America is primarily related to the domestic supply and demand equation. Demand is primarily affected by industrial usage and also by heating requirements in winter and cooling requirements in summer, with slower industrial activity and/or warm winters and/or cool summers having a negative demand influence. Supplies are generally domestic and respond to prices, but an increase in the deliverability of global natural gas liquids into the North American market as well as the export of natural gas out of the North American market both also influence the supply situation at times. Recently, the spot price of natural gas in North America has reached historically low prices. The price of crude oil is set in U.S. dollars on the world market and is influenced by global supply and demand factors as well as external events, such as terrorist activity in oil exporting countries. Canadian producers realize a Canadian dollar price for crude oil, natural gas liquids and natural gas, all of which are determined in large part by the U.S. dollar price for such products adjusted for the U.S. to Canadian dollar exchange rate. The exchange rate is influenced by many factors, which have and may continue to result in high volatility.

Any estimates of cash flow and debt levels are based on assumptions regarding production and sales rates, production mix, natural gas, NGL and oil commodity prices, royalty rates, operating costs, general and administrative costs and capital expenditures. The risk that cash flow from operations may be less than expected or debt levels may be higher than expected is the aggregate of all risks affecting the individual components thereof.

Investors are cautioned that these factors and risks are difficult to predict and that the assumptions used in the preparation of such information, although considered reasonably accurate at the time of preparation, may prove to be incorrect. Accordingly, investors are cautioned that the actual results achieved will vary from the information provided herein and the variations may be material. Investors are also cautioned that the foregoing list of factors is not exhaustive. Consequently, there is no representation by Cequence that actual results achieved will be the same in whole or in part as those set out in the forward-looking statements. Furthermore, the forward-looking statements contained in this Annual Information Form are made as of the date hereof, and Cequence does not undertake any obligation, except as required by applicable securities legislation, to update publicly or to revise any of the included forward-looking statements, whether as a result of new information, future events or otherwise. The forward-looking statements contained in this Annual Information Form are expressly qualified by this cautionary statement.

NON-GAAP MEASURES

In this Annual Information Form, management of Cequence uses certain financial reporting measures that are commonly used as benchmarks within the oil and natural gas industry. These measures include "netbacks" and "funds flow from operations". These measures are not defined under IFRS and should not be considered in isolation or as an alternative to conventional IFRS measures. Certain of these measures are not necessarily comparable to a similarly titled measure of another company. When these measures are used, they have been footnoted and the footnote to the applicable measure notes that the measure is "non-GAAP" and contains a description of how to reconcile the measure to the applicable financial statements. These measures should be given careful consideration by the investor.

Specifically, management of Cequence uses netbacks and funds flow from operations as they are non-GAAP measures used extensively in the Canadian energy sector for comparative purposes. Netbacks are calculated through total revenue less royalties, operating costs and transportation costs. Management utilizes this measure to analyze operating performance. Cequence defines the term "funds flow from operations" as cash flow from operating activities before adjustments for decommissioning liability expenditures, proceeds from the sale of commodity contracts and changes in non-cash working capital. Cequence evaluates its performance based on earnings and funds flow from operations. Cequence considers funds flow from operations a key measure as it demonstrates Cequence's ability to generate the cash flow necessary to fund future growth through capital investment and to repay debt. Cequence's calculation of funds flow from operations may not be comparable to that reported by other companies. Funds flow from operations per Share is calculated using the same weighted average number of Shares outstanding used in the calculation of income (loss) per Share.

Non-GAAP measures do not have a standardized meaning prescribed by IFRS and are therefore unlikely to be comparable to similar measures presented by other issuers.

CEQUENCE ENERGY LTD.

The Company was originally incorporated pursuant to the provisions of the *Business Corporations Act* (Ontario) as "Metrophotonics Inc." on April 4, 2000 and was continued under the ABCA as "Sabretooth Energy Ltd." on September 5, 2005. In addition, the articles of the Company have been amended as follows: (i) on January 31, 2005, to add an unlimited number of Non-Voting Shares to its authorized capital, to consolidate the issued and outstanding Shares on a hundred-for-one basis and to reduce the stated capital of the issued and outstanding Shares; (ii) on February 4, 2005, to change its name to "1395177 Ontario Inc."; (iii) on February 15, 2006, the Company amalgamated with Stratagem Energy Corp. and the amalgamated corporation continued under the name "Sabretooth Energy Ltd."; (iv) on July 18, 2007, to convert all the issued and outstanding Non-Voting Shares into Shares and, immediately thereafter, to consolidate the issued and outstanding Shares on a four-for-one basis; (v) on January 1, 2008, the Company amalgamated with its wholly-owned subsidiary, Sabretooth Resources Inc. (formerly Bear Ridge Resources Inc.), and the amalgamated corporation continued under the name "Sabretooth Energy Ltd."; (vi) on July 30, 2009, to change the rights, privileges, restrictions and conditions attached to the Non-Voting Shares to ensure equitable economic treatment between holders of Shares and Non-Voting Shares in certain circumstances; (vii) on July 31, 2009, to change its name to "Cequence Energy Ltd."; (viii) on August 17, 2009, to consolidate the issued and outstanding Shares on a four-for-one basis; (ix) on July 1, 2010, the Company amalgamated with Peloton Exploration Corp.; and (x) on January 1, 2011, the Company amalgamated with Cequence Acquisitions Ltd., a wholly owned subsidiary of the Company.

The Company's principal office is located at 3100, 525 - 8th Avenue S.W., Calgary, Alberta, T2P 1G1 and its registered office is located at 3700, 400 - 3rd Avenue S.W., Calgary, Alberta, T2P 4H2.

GENERAL DEVELOPMENT OF THE BUSINESS

Three Year History

2012

During 2012, Cequence focused its operational activities on further exploration and development in the Deep Basin. The Company drilled its first Fahler horizontal well at Simonette/Resthaven as part of a farm-in commitment, the results of which management believes validates a 20 section geological prospect previously defined by well control and confirmed by 3D seismic on Cequence lands. The Company drilled a total of 7 gross (5.8 net) wells in 2012 in the Deep Basin.

Cequence completed the construction of the meter station to tie in to the Alliance pipeline at Simonette related to its Aux Sable arrangement. Capacity at the Alliance/Aux Sable meter station is 120 MMcf/d. The Company also installed a third compressor at Simonette, resulting in current capacity through the Simonette gathering system of 40 MMcf/d.

In 2012, Cequence added (net of dispositions) 14.6 MMBOE of proved reserves and 26.9 MMBOE of proved plus probable reserves.

On May 31, 2012, Cequence entered into an arrangement agreement with Open Range Energy Corp. ("**Open Range**") pursuant to which it was proposed that Cequence would acquire all of the issued and outstanding common shares of Open Range. On July 3, 2012, Cequence received a termination fee of \$4.6 million concurrently with the termination of the arrangement agreement.

Cequence completed a bought deal short form prospectus offering in 2012. On June 20, 2012, the Company closed the offering of: (i) 11,683,500 Shares at \$1.20 per share; (ii) 4,850,000 CEE flow-through Shares at \$1.45 per share; and (iii) 3,800,000 CDE flow-through Shares for aggregate gross proceeds of approximately \$26.1 million. On July 12, 2012, pursuant to the exercise of the over-allotment option granted to the underwriters in connection with the June 20, 2012 closing, Cequence issued an additional 1,252,500 Shares at \$1.20 per share for gross proceeds of approximately \$1.5 million.

On June 22, 2012, Cequence completed the sale, on a private placement basis, of 8,333,333 Shares at a price of \$1.20 per share for gross proceeds of approximately \$10 million.

On December 5, 2012, the Company completed a bought deal short form prospectus offering of 8,560,000 CEE flow-through Shares at \$1.87 per share for gross proceeds of approximately \$16 million.

2013

During 2013, Cequence focused its operational activities on the development of its Simonette and Ansell assets in the Deep Basin. The Company drilled its first two wells in the Ansell area during the year. Cequence has 46.5 (gross) sections of land in the area and with the positive drilling results, which have been achieved with its partner in the area, the Ansell area became a new core area of the Company near the end of 2013. The Company drilled a total of 12.0 gross (11.3 net) wells in 2013 at Simonette and Ansell.

In 2013, Cequence added (net of dispositions) 12.5 MMBOE proved reserves and 25.6 MMBOE proved plus probable reserves.

On April 15, 2013 Cequence completed an asset exchange with Donnybrook Energy Inc. ("**Donnybrook**") for Donnybrook's oil and gas properties located in the Simonette and Resthaven areas of Alberta (the "**Donnybrook Assets**") for Cequence's oil and gas assets located in the Fir area (the "**Non-core Assets**") and an aggregate of 10,300,000 Shares, which were immediately transferred to the Donnybrook shareholders. The Donnybrook Assets consist of 33 gross (16.5) net sections of Montney rights at Simonette and 2.7 net sections of Montney land at Resthaven, with production of approximately 120 BOE/d. The Non-core Assets were not operated by Cequence and consist of 5 net sections of land with production of 220 BOE/d.

On October 3, 2013 Cequence issued \$60 million of senior unsecured notes to CPPIB Credit Investments Inc. ("**CII**"), a wholly-owned subsidiary of Canada Pension Plan Investment Board, with a further \$60 million of notes available at a future date, subject to approval by both parties. The initial investment of notes are due 2018 and bear interest at 9% per annum. Cequence also issued 3 million warrants to purchase Shares to CII with an exercise price of \$2.03.

2014

During 2014, Cequence focused its operational activities on the development of its Simonette assets in the Deep Basin. Cequence drilled a total of 16.0 gross 14.0 net) wells in the Simonette area in 2014, and, as of December 31, 2014, Cequence has 138,432 gross (108,628 net) sections of land in this area.

In 2014, Cequence added (before production and including revisions) 12.7 MMBOE proved reserves and 22.7 MMBOE proved plus probable reserves.

On July 7, 2014, Cequence completed the disposition of its entire interest in its non-operated assets located in the Ansell area in the Deep Basin (the "**Ansell Assets**") for total cash consideration of approximately \$140 million, prior to customary closing adjustments and net of costs. The Ansell Assets consist of 18,800 net acres of land, 1,600 BOE/d of production and a 49 percent working interest the field infrastructure. Proceeds from the disposition were initially used to repay borrowings on the Company's credit facilities with the excess amount held as cash and used to fund the Company's capital expenditure program, which was focused on the Company's Simonette property in the Deep Basin.

GENERAL DESCRIPTION OF THE BUSINESS

Cequence is a public company engaged in the acquisition, exploration, development and production of petroleum and natural gas reserves in Western Canada. During the year ended December 31, 2014, the Company focused its activities in the Deep Basin area of Northwest Alberta. Cequence pursues a strategy of drilling for low decline, long life, liquids rich natural gas and crude oil targets with multiple prospective horizons.

Corporate Strategy

Cequence's business strategy is to increase production, cash flow and Shareholder value in a cost-effective manner through focused drilling, strategic acquisitions and operational efficiency. The Company manages risk by following its investment guidelines, namely:

- drill for long-life, liquids-rich natural gas and crude oil;
- invest in areas with large, scalable resources to target;
- capitalize on the Company's extensive in-house technical expertise to generate drilling opportunities and take advantage of property and corporate acquisitions and dispositions that add value to Shareholders;
- use the Company's existing infrastructure and extensive seismic data base as a potential profit centre and as leverage to enhance the Company's position in its core areas; and
- use financial expertise to efficiently manage capital resources.

The Board may, in its discretion, approve asset or corporate acquisitions or investments that do not conform to the guidelines discussed above.

Capital Expenditures

Cequence may approve future capital expenditures or farm-outs. Future capital expenditures on the Company's assets are intended to maintain or improve production from the Company's properties. Cequence may finance capital expenditures from cash flow, drawings on its bank loan facility, proceeds from issuance of additional Shares or other securities, proceeds of disposition of oil and natural gas properties, farm-outs or with working capital.

The Company may acquire additional properties and related tangible equipment and fund such acquisitions from cash flow, drawings on its bank loan facility, proceeds from issuance of additional Shares or other securities, proceeds of disposition of oil and natural gas properties, farm-outs or with working capital. The Company may sell any of its interests in properties. In connection with the sale of any interests in Cequence's properties, the Board will determine whether the net proceeds of the sale should be reinvested in additional properties or capital expenditures, used to repay borrowings or distributed to Shareholders.

Ongoing Acquisition and Disposition Activities

Potential Acquisitions

Cequence evaluates potential acquisitions of all types of oil and natural gas and other energy related assets as part of its on-going asset management program. The Company is normally in the process of evaluating several potential acquisitions at any one time which individually or together could be material. As of the date hereof, Cequence has not reached agreement on the price or terms of any potential material acquisitions and cannot predict whether any current or future opportunities will result in one or more acquisitions.

Potential Dispositions and Farm-Outs

Cequence evaluates potential dispositions of its oil and natural gas assets as part of the Company's ongoing asset management program. In addition, Cequence evaluates potential farm-out opportunities with other industry participants in respect of its oil and natural gas assets in circumstances where the Company believes it is prudent to do so based on, among other things, its capital program, development plan timelines and the risk profile of such assets. The Company is normally in the process of evaluating several potential dispositions of assets and farm-out opportunities at any one time, which individually or together could be material. As of the date hereof, the Company has not reached agreement on the price or terms of any potential material dispositions or farm-outs and cannot predict whether any current or future opportunities will result in one or more dispositions or farm-outs.

Environment Policies

The oil and gas industry is subject to environmental regulations pursuant to applicable legislation. Such legislation provides for restrictions and prohibitions on releases or emissions of various substances produced in association with certain oil and gas industry operations, and requires that well, pipeline and facility sites be abandoned and reclaimed to the satisfaction of environmental authorities. As at December 31, 2014, Cequence recorded a liability on its balance sheet of \$37,263 million for asset abandonment and reclamation obligations. The Company is committed to managing and operating in a safe, efficient, environmentally responsible manner in association with its industry partners and is committed to continually improving the Company's environmental, health, safety and social performance. To fulfill this commitment, the Company's operating practices and procedures are consistent with the requirements established for the oil and gas industry. Cequence supports and endorses the Environmental Operating Procedures developed by the Canadian Association of Petroleum Producers ("CAPP"). Key environmental considerations include air quality and climate change, water conservation, spill management, waste management plans, lease and right-of-way management, natural and historic resource protection, and liability management (including site assessment, remediation and reclamation). These practices and procedures apply to the Company's employees and Cequence monitors all activities and makes reasonable efforts to ensure that companies who provide services to Cequence will operate in a manner consistent with this environmental policy.

The Company believes that it meets all existing environmental standards and regulations and includes sufficient amounts in its capital expenditure budget to continue to meet current environmental protection requirements. These requirements apply to all operators in the oil and gas industry; therefore, it is not anticipated that the Company's competitive position within the industry will be adversely affected by changes in applicable legislation. However, no assurance can be given that the application of environmental laws to the business and operations of Cequence will not result in a curtailment of production or a material increase in the costs of production, development or exploration activities or otherwise adversely affect Cequence's financial condition, results of operations or prospects. Cequence has internal procedures designed to ensure that detailed due diligence reviews to assess environmental liabilities and regulatory compliance are completed prior to proceeding with new acquisitions and developments.

The Company's environmental management plan and operating guidelines focus on minimizing the environmental impact of Cequence's operations while meeting regulatory requirements and corporate standards. The environmental program includes: an internal environmental compliance audit and inspection program; a suspended well inspection program to support future development or eventual abandonment; appropriate remediation, reclamation and decommissioning standards for wells, pipelines and facilities ready for abandonment; an effective surface reclamation program; a groundwater monitoring program; a spill prevention, response, and clean-up program; a fugitive emission survey and repair program, and an environmental liability assessment program. The Company participates in both the Canadian federal and provincial regulated GHG emissions reporting programs and continues to quantify annual GHG emissions for internal reporting purposes. . See "Risk Factors - Environmental" and "Industry Conditions - Environmental Regulation" in this Annual Information Form.

The Company maintains an insurance program consistent with industry practice to protect against losses due to accidental destruction of assets, well blowouts, pollution and other operating accidents or disruptions. The Company also has operational and emergency response procedures and occupational health, safety and environmental programs in place to reduce potential loss exposure.

Cyclical and Seasonal Impact of Industry

The Company's operational results and financial condition will be dependent on the prices received for oil and natural gas production. Oil and natural gas prices have fluctuated widely during recent years and are determined by supply and demand factors, including weather and general economic conditions, as well as conditions in other oil and natural gas regions. Any decline in oil and natural gas prices could have an adverse effect on the Company's financial condition.

Competition

The oil and natural gas industry is competitive in all of its phases. Cequence competes with numerous other participants in the search for, and the acquisition of, oil and natural gas properties and in the marketing of oil and natural gas. Cequence's competitors include resource companies which have much greater financial resources, staff

and facilities than those of Cequence. Competitive factors in the distribution and marketing of oil and natural gas include price and methods and reliability of delivery. Cequence believes that its competitive position is similar to that of other oil and gas issuers of similar size and at a similar stage of development.

Personnel

As of December 31, 2014, Cequence had 26 head office employees, 4 field employees and 8 office consultants.

STATEMENT OF RESERVES DATA AND OTHER OIL AND GAS INFORMATION

In accordance with NI 51-101, GLJ prepared the GLJ Report. The GLJ Report evaluated, as at December 31, 2014, the oil, NGL and natural gas reserves attributable to the properties of Cequence.

The tables below are a summary of the oil, NGL and natural gas reserves attributable to the properties of Cequence and the net present value of future net revenue attributable to such reserves as evaluated in the GLJ Report based on forecast price and cost assumptions. The tables summarize the data contained in the GLJ Report and, due to rounding, may contain slightly different numbers than such report and certain columns may not add exactly. In addition, the estimates of reserves and future net revenue for individual properties may not reflect the same confidence level as estimates of reserves and future net revenue for all properties, due to the effects of aggregation.

The net present value of future net revenue attributable to reserves is stated without provision for interest costs and general and administrative costs, but after providing for estimated royalties, production costs, development costs, other income, future capital expenditures and well abandonment costs for only those wells assigned reserves by GLJ. It should not be assumed that the undiscounted or discounted net present value of future net revenue attributable to reserves estimated by GLJ represent the fair market value of those reserves. Other assumptions and qualifications relating to costs, prices for future production and other matters are summarized herein. The recovery and reserve estimates of oil, NGL and natural gas reserves provided herein are estimates only. Actual reserves may be greater than or less than the estimates provided herein.

The values shown for income taxes and future net revenue after income taxes were calculated on a stand-alone basis in the GLJ Report. The values shown may not be representative of future income tax expenses, applicable tax horizon or after tax valuation.

The (i) reserves, (ii) future net revenue and related forecast prices and costs and (iii) production history and estimates disclosed herein and reported in the GLJ Report include those NGLs within Cequence's natural gas stream that are delivered, quantified and for which Cequence is paid based on market rates pursuant to the an NGL Agreement with Aux Sable Canada LP ("NGL Agreement"). For such purposes, it has been assumed that the NGL Agreement will be successively renewed for five year terms and continue until 2032. As at December 31, 2014, these NGLs represented approximately 87% of Cequence's proved plus probable NGL reserve volumes, approximately 5% of Cequence's total proved plus probable reserve volumes, approximately 5% of the net present value of Cequence's future net revenue before taxes discounted at 10% using forecast prices and costs and approximately 4% of Cequence's production. If these NGLs were instead reported as part of Cequence's natural gas, it would both increase Cequence's natural gas reserves (since these are notionally reduced for shrinkage attributable to the extraction of these NGLs) and the pricing Cequence receives for its natural gas and decrease Cequence's NGL reserves and production accordingly, but would have no effect on Cequence's future net revenues.

The GLJ Report is based on certain factual data supplied by Cequence and GLJ's opinion of reasonable practice in the industry. The extent and character of ownership and all factual data pertaining to petroleum properties and contracts (except for certain information residing in the public domain) were supplied by Cequence to GLJ. GLJ accepted this data as presented and neither title searches nor field inspections were conducted.

Summary of Oil, Natural Gas and NGL Reserves

Reserves Category	Light and Medium Crude Oil		NGL		Natural Gas		Total Oil Equivalent	
	Gross (Mbbbl)	Net (Mbbbl)	Gross (Mbbbl)	Net (Mbbbl)	Gross (MMcft)	Net (MMcft)	Gross (MBOE)	Net (MBOE)
Proved								
Developed Producing	1,595	1,106	997	854	96,604	84,834	18,693	16,099

Future Net Revenue by Production Group

Reserves Category and Product Group	Future Net Revenue Before Future Income Tax Expenses (Discounted at 10%/year)	Unit Value Before Future Income Tax Expenses (Discounted at 10%/year) ⁽¹⁾	
	(M\$)	(\$/BOE)	(\$/Mcf)
Total Proved	447,485	9.07	1.51
Light and Medium Crude Oil ⁽²⁾	4,576	18.92	3.15
Natural Gas (associated & non-associated) ⁽³⁾	442,910	9.02	1.50
Total Proved plus Probable	854,223	8.43	1.40
Light and Medium Crude Oil ⁽²⁾	6,266	19.18	3.20
Natural Gas (associated & non-associated) ⁽³⁾	847,957	8.39	1.40

Notes:

- (1) Unit values are based on net reserve volumes
- (2) Including solution gas and other by-products
- (3) Including by-products but excluding solution gas

Summary of Pricing Assumptions and Inflation Rate Assumptions

GLJ employed the following pricing, exchange rate and inflation rate assumptions as of January 1, 2015 in the GLJ Report in estimating Cequence's reserves data using forecast prices and costs:

Year	Natural Gas		Light Crude Oil		Pentanes Plus	Inflation Rates %/year	Exchange Rate (\$US/\$Cdn)
	Henry Hub	AECO Gas Price	WTI	Edmonton	Edmonton		
	(\$US/MMBtu)	(\$Cdn/MMBtu)	(\$US/bbl)	(\$Cdn/bbl)	(\$Cdn/bbl)		
Forecast							
2015	3.31	3.31	62.50	64.71	69.24	2.0	0.850
2016	3.75	3.77	75.00	80.00	85.60	2.0	0.875
2017	4.00	4.02	80.00	85.71	91.71	2.0	0.875
2018	4.25	4.27	85.00	91.43	97.83	2.0	0.875
2019	4.50	4.53	90.00	97.14	103.94	2.0	0.875
2020	4.75	4.78	95.00	102.86	110.06	2.0	0.875
2021	5.00	5.03	98.54	106.18	113.62	2.0	0.875
2022	5.25	5.28	100.51	108.31	115.89	2.0	0.875
2023	5.50	5.53	102.52	110.47	118.20	2.0	0.875
2024	5.68	5.71	104.57	112.67	120.56	2.0	0.875

Thereafter escalation rate of 2%

The weighted average realized sales prices for Cequence for the year ended December 31, 2014 were \$4.97/Mcf for natural gas, \$89.76/bbl for light and medium crude oil, \$94.04/bbl for condensate and \$41.10/bbl for NGL.

Reconciliation of Company Gross Reserves by Product Type

The following table sets forth the changes between the Company's reserve volume estimates made as at December 31, 2014 and the corresponding estimates as at December 31, 2013, using forecast prices and costs:

Factors	Light and Medium Crude Oil	Natural Gas (associated & non- associated)	NGL	Total Oil Equivalent
	(Mbbbl)	(MMcf)	(Mbbbl)	(MBOE)
TOTAL PROVED				
December 31, 2013	5,695	277,662	3,194	55,166

Proved Undeveloped Reserves

The following table sets forth the volumes of proved undeveloped reserves that were first attributed for each of the Company's product types for each of the most recent three financial years and, in the aggregate, before that time, using forecast prices and costs:

Financial Year End	Light and Medium Oil		Natural Gas		NGL		Total Oil Equivalent	
	(Mbbbl)		(MMcf)		(Mbbbl)		(Mbbbl)	
	First Attributed	Total at Year-End	First Attributed	Total at Year-End	First Attributed	Total at Year-End	First Attributed	Total at Year-End
Prior	1,567	1,567	96,185	96,185	1,096	1,096	18,694	18,694
2012	1,059	2,907	53,759	159,440	548	1,674	10,567	31,154
2013	834	4,100	37,124	176,888	447	2,017	7,469	35,598
2014	481	3,537	21,490	168,474	216	1,774	4,279	33,390

Proved undeveloped reserves are generally those reserves related to planned infill drilling locations. The Company's proved undeveloped reserves are forecasted to be developed during the next three years in accordance with the Company's development program and cash flows set out in the reserve report.

Probable Undeveloped Reserves

The following table sets forth the volumes of probable undeveloped reserves that were first attributed for each of the Company's product types for each of the most recent three financial years and, in the aggregate, before that time, using forecast prices and costs:

Financial Year End	Light and Medium Oil		Natural Gas		NGL		Total Oil Equivalent	
	(Mbbbl)		(MMcft)		(Mbbbl)		(Mbbbl)	
	First Attributed	Total at Year-End	First Attributed	Total at Year-End	First Attributed	Total at Year-End	First Attributed	Total at Year-End
Prior	1,889	1,889	132,488	132,488	1,580	1,580	25,550	25,550
2012	1,501	3,506	73,570	199,802	787	2,135	14,550	38,941
2013	1,064	5,578	50,452	248,870	609	2,819	10,081	49,876
2014	1,155	5,540	49,564	266,195	486	2,763	9,901	52,669

Probable undeveloped reserves relate to wells to be drilled, tied in and brought on-stream in the future. The majority of the Company's undeveloped reserves are associated with its Montney development at Simonette. The Company's probable undeveloped reserves are forecasted to be developed during the following 5 years in accordance with the Company's development program and cash flows set out in the reserve report.

Significant Factors or Uncertainties Affecting Reserves Data

The process of estimating reserves is complex. It requires significant judgments and decisions based on available geological, geophysical, engineering, and economic data. These estimates may change substantially as additional data from ongoing development activities and production performance becomes available and as economic conditions impacting oil and natural gas prices and costs change. The reserve estimates contained herein are based on current production forecasts, prices and economic conditions.

As circumstances change and additional data becomes available, reserve estimates also change. Estimates made are reviewed and revised, either upward or downward, as warranted by the new information. Revisions are often required due to changes in well performance, prices, economic conditions and governmental restrictions.

Although every reasonable effort is made to ensure that reserve estimates are accurate, reserve estimation is an inferential science. As a result, the subjective decisions, new geological or production information and a changing environment may impact these estimates. Revisions to reserve estimates can arise from changes in year-end oil and natural gas prices and reservoir performance. Such revisions can be either positive or negative.

Future Development Costs

The table below sets out the development costs deducted in the estimation in the GLJ Report of future net revenue attributable to proved reserves and proved plus probable reserves, using forecast prices and costs:

Year	Proved Reserves	Proved Plus Probable Reserves
	(M\$)	(M\$)
2015	50,390	56,778
2016	150,066	215,147
2017	98,763	252,115
2018	43,677	215,682
2019	19,984	63,671
Remaining Years	18,547	45,741
Total Undiscounted	381,427	849,135

Cequence estimates that its internally generated cash flow will be sufficient to fund the future development costs disclosed above. Cequence typically has available three sources of funding to finance its capital expenditure program: internally generated cash flow from operations; new equity issues, if available on favourable terms; and

debt financing, when appropriate. Debt financing is available to Cequence at its lender's prevailing lending rates plus an applicable margin dependent upon debt to trailing cash flow.

Cequence expects to fund its total 2015 capital program with internally generated cash flow and through accessing its bank debt and, although quarterly fluctuations in funding levels are expected, the objective is to remain within the Company's debt capacity throughout the 2015 financial year.

Description of Principal Properties

Cequence's principal properties are located in: (i) the Deep Basin area of Northwest Alberta (ii) the Peace River Arch area of Northwest Alberta; and (iii) Northeast British Columbia. The Company owns a total of approximately 470,229 gross acres (264,841 net acres) of oil and natural gas leases with the potential for multi-zone production at an average working interest of approximately 56 percent.

Deep Basin

Cequence's Deep Basin assets are located in Northwest Alberta. These assets include an average working interest of approximately 58 percent in 227,712 gross (132,495 net) acres of undeveloped land. The Deep Basin assets include fields located in the Simonette, Resthaven and Kaybob areas. The Deep Basin assets also include 4.0 gross (2.25 net) producing oil wells, 2.0 gross (0.3 net) non-producing oil wells, 172.0 gross (85.8 net) producing gas wells and 21.0 gross (10.9 net) non-producing gas wells.

Production from the Deep Basin assets are weighted 84 percent to natural gas with the balance being light crude oil and NGL. Cequence owns its infrastructure at Simonette including an extensive pipeline and gathering system and a 100 mmcf/d compression and dehydration facility. Cequence delivers rich natural gas directly to the Alliance System with a 120 mmcf/d meter station located at the Simonette field .

During the year ended December 31, 2014, Cequence drilled 16.0 gross (14.0 net) wells in the Deep Basin area. In 2015, Cequence plans to focus its drilling operations in the Deep Basin area and, in particular, on the development of its Simonette project.

Peace River Arch

Cequence's Peace River Arch assets are located in Northwest Alberta. These assets include an average working interest of approximately 52 percent in 106,940 gross (55,407 net) acres of undeveloped land. The Peace River Arch assets include fields located in the Fourth Creek, George, Blueberry, Valhalla, Knopcik and Cecil areas. The Peace River Arch assets also include 17 gross (9.6 net) producing oil wells, 8 gross (5.2 net) non-producing oil wells, 48 gross (30.1 net) producing gas wells and 44 gross (25.5 net) non-producing gas wells.

Production from the Peach River Arch assets are weighted 82 percent to natural gas with the balance being light crude oil and NGL. Production is pipelined to third party owned processing facilities that include fluid handling and gas processing with a sales gas connection to the Nova and Alliance pipelines.

During the year ended December 31, 2014, Cequence did not drill any wells in the area and does not plan to drill any wells in the Peace River Arch area in 2015.

Northeast British Columbia

Cequence's Northeast British Columbia assets include an average working interest of approximately 57 percent in approximately 129,128 gross (73,959 net) acres of undeveloped land. The properties include fields located in the Silver, Noel and Gunnell areas. The assets also include 2 gross (1.8 net) producing oil wells, 2 gross (1.7 net) non-producing oil wells, 75 gross (43.1 net) producing gas wells and 39 gross (27.5 net) non-producing gas wells.

Production from the Northeast British Columbia assets are weighted 95 percent to natural gas with the balance being light crude oil and NGL. Production is pipelined to a third party owned facility that includes NGL handling and gas processing with a sales gas connection to the Spectra and Altagas pipelines.

During the year ended December 31, 2014, Cequence did not drill any wells in the area and does not plan to drill any wells in the Northeast British Columbia area in 2015.

Oil and Natural Gas Wells

The following table sets forth the number and status of wells in which Cequence has a working interest as at December 31, 2014:

	Light and Medium Crude Oil		Natural Gas	
	Gross	Net	Gross	Net
Producing				
Alberta	21.0	11.8	220.0	115.9
British Columbia	2.0	1.8	75.0	43.0
Non-producing				
Alberta	10.0	5.5	65.0	36.4
British Columbia	2.0	1.7	39.0	27.5
Total	35.0	20.8	399.0	222.8

Properties With No Attributed Reserves

The following table summarizes the undeveloped gross and net acres of properties with no attributed reserves in which Cequence has an interest and also the number of net acres for which Cequence's rights to explore, develop or exploit will, absent further action, expire within one year:

	Gross Acres	Net Acres	Net Acres Expiring Within One Year
Alberta	341,171	190,883	12,605
British Columbia	129,128	73,958	4,088
Total	470,299	264,842	16,693

Cequence measures its land acreage based on its mineral rights and mineral licenses underlying a given section of land. Land acreage may exceed the overlying surface area as Cretaceous and Montney rights are considered to be discrete mineral rights.

Commitments

During the year ended December 31, 2011, the Company entered into a drilling service agreement whereby the Company made a deposit of \$3.5 million to obtain a right of first refusal on the use of two drilling rigs over the five years following the date that use of the rigs commences. The deposit is to be drawn down as the Company incurs costs related to the use of the drilling rigs and approximately \$2.6 million has been drawn down at December 31, 2014.

Other than the foregoing, the Company does not have any material work commitments.

Cequence's forward sales contracts are set forth in its management's discussion and analysis for the year-ended December 31, 2014.

Additional Information Concerning Abandonment and Reclamation Costs

Cequence typically estimates well abandonment costs area by area. Reserve well abandonment costs are included in the GLJ Report as deductions in arriving at future net revenue.

The expected total abandonment and disconnect costs, net of salvage value, included in the GLJ Report for 203 net wells under the proved reserves category is \$14.6 million undiscounted (\$4.0 million discounted at 10 percent), of which a total of \$0.9 million undiscounted is estimated to be incurred in 2015, 2016 and 2017. This estimate does

not include expected reclamation for surface well leases of \$14.9 million undiscounted (\$2.2 million discounted at 10 percent).

Cequence will be liable for its share of ongoing environmental obligations and for the ultimate reclamation of the properties held by it upon abandonment. Ongoing environmental obligations are expected to be funded out of cash flow.

Tax Horizon

Based on production from existing reserves, Cequence estimates that it will not be required to pay income taxes in the next three years.

Costs Incurred

The following table summarizes capital expenditures (net of incentives and net of certain proceeds and including capitalized general and administrative expenses) incurred by Cequence for the year ended December 31, 2014:

Property Acquisition Costs		Exploration Costs	Development Costs
Proved Properties	Unproved Properties		
(M\$)	(M\$)	(M\$)	(M\$)
-	2,244	2,092	176,767

Exploration and Drilling Activity

The following table summarizes the gross and net exploratory and development wells Cequence has drilled, or has participated in for the year ended December 31, 2014:

	Gross		Net	
	Exploratory	Development	Exploratory	Development
Light and Medium Crude Oil Wells	-	-	-	-
Natural Gas Wells	-	20.0	-	14.9
Dry Wells	-	-	-	-
Service Wells ⁽¹⁾	-	-	-	-
Total	-	20.0	-	14.9

Note:

- (1) A service well is a well drilled or completed for the purpose of supporting production in an existing field. Wells in this class are drilled for the following specific purposes: gas injection (natural gas, propane, butane, or flue gas), water injection, steam injection, air injection, salt-water disposal, water supply for injection, observation or injection for combustion.

Production Estimates

The following table sets forth for each product type the average daily volume of production estimated by GLJ in the GLJ Report for the first year reflected in the estimates of gross proved reserves, gross probable reserves and gross proved plus probable reserves as disclosed above:

Reserve Category	Light and Medium Crude Oil	Natural Gas	NGL	Total Oil Equivalent
	(bbl/d)	(Mcf/d)	(bbl/d)	(BOE/d)
Proved				
Deep Basin	1,317	62,995	671	12,486
Other	80	11,083	90	2,010
	1,397	74,033	761	14,496

Reserve Category	Light and Medium Crude Oil	Natural Gas	NGL	Total Oil Equivalent
	(bbl/d)	(Mcf/d)	(bbl/d)	(BOE/d)
Probable

Total (\$/BOE)	<u>31.25</u>	<u>23.87</u>	<u>20.24</u>	<u>18.97</u>

Production Volume by Field

The following table sets forth the average daily production from each of the Company's important fields for the year ended December 31, 2014:

Field	Light and Medium Oil (bbl/d) ⁽¹⁾	Natural Gas (Mcf/d)	NGL (bbl/d)	Total Oil Equivalent (BOE/d)	%
Deep Basin	838	45,297	599	8,987	82
Peace River Arch	84	3,313	39	675	6
Northeast BC	44	7,212	24	1,270	12
Total	966	55,822	662	10,932	100

Note:

(1) Light and medium oil includes field condensate volumes.

DESCRIPTION OF CAPITAL STRUCTURE

Cequence is authorized to issue an unlimited number of Shares and an unlimited number of Non-Voting Shares. As at the date hereof, 211,027,882 Shares and no Non-Voting Shares were issued and outstanding.

Shares

Each Share entitles the holder thereof to one vote at all meetings of Shareholders (except meetings at which only holders of another specified class of shares are entitled to vote); to receive dividends as and when declared by the Board (provided that Cequence shall not pay dividends on Shares unless at the same time Cequence declares and pays dividends on Non-Voting Shares in a proportionate amount); and subject to the prior rights of holders of any other class of shares ranking ahead of Shares and on a *pari passu* basis together with the holders of Non-Voting Shares, to receive the remaining property of Cequence upon liquidation, dissolution or wind-up of Cequence.

Non-Voting Shares

Holders of Non-Voting Shares are not, as such, entitled to receive notice of or to attend any meeting of Shareholders or to vote at any such meeting, subject to the provisions of the ABCA. Holders of Non-Voting Shares are entitled to dividends as and when declared by the Board (provided that Cequence shall not pay dividends on Non-Voting Shares unless, at the same time, Cequence also declares and pays dividends on Shares in a proportionate amount); and, subject to the rights of holders of any other class of shares ranking ahead of Non-Voting Shares on a *pari passu* basis together with the holders of Shares, to receive the remaining property of Cequence upon the liquidation, dissolution or wind-up of Cequence.

DIVIDENDS

Cequence has not declared or paid any dividends on the Shares or the Non-Voting Shares since incorporation. It is not currently expected that dividends will be paid in respect of the Shares and/or Non-Voting Shares during the current phase of development of Cequence's business and operations. The payment of dividends in the future will be at the discretion of the Board and will be dependent on the future earnings and financial condition of the Company and such other factors as the Board considers appropriate.

MARKET FOR SECURITIES

Trading Price and Volume

The Shares are listed and posted for trading on the TSX under the symbol "CQE". The following table sets forth the price ranges and volume traded of Shares as reported by the TSX for the periods indicated.

2014	High	Low	Close	Volume
January	1.94	1.63	1.72	20,535,212
February	2.25	1.63	2.18	29,876,651
March	2.58	2.10	2.56	15,828,580

2014	High	Low	Close	Volume
April	3.15	2.53	3.02	21,222,972
May	3.14	2.46	2.87	17,824,102
June	3.21	2.72	2.93	14,384,743
July	2.96	2.11	2.12	16,873,074
August	2.35	1.94	2.33	24,325,503
September	2.30	1.76	1.83	8,172,741
October	1.86	1.35	1.43	21,769,772
November	1.74	1.26	1.31	18,698,897
December	1.32	0.94	1.06	13,763,078

Prior Sales

The following table sets forth, for each class of securities of the Company that is outstanding but not listed or quoted on a marketplace, the price at which securities of the class have been issued during the period from January 1, 2014 to December 31, 2014 and the number of securities of the class issued at that price and the date on which the securities were issued.

Date of Issue/Grant	Number and Designation of Securities	Issue/Exercise Price
January 13, 2014	20,000 Options	\$1.70
January 13, 2014	20,000 RSUs	Na
April 22, 2014	8,000 RSUs	Na
August 22, 2014	600,000 Options	\$2.22
August 22, 2014	20,000 RSUs	Na
December 12, 2014	35,000 RSUs	Na
December 15, 2014	30,000 Options	\$1.04
December 19, 2014	398,000 RSUs	Na

DIRECTORS AND OFFICERS

Directors and Officers

The following table sets forth the names, province or state and country of residence, present positions with Cequence and principal occupations during the past five years of the officers and directors of Cequence.

Name and Residence	Position(s) with Cequence	Principal Occupation(s)
Paul Wanklyn Alberta, Canada	President, Chief Executive Officer and Director	President and Chief Executive Officer of Cequence since September 2010. Prior thereto, from June 2004 to September 2010, President and Chief Executive Officer of Temple Energy Corp.
Todd Brown Alberta, Canada	Chief Operating Officer	Chief Operating Officer of Cequence since August 2014. Prior thereto from May 2014 until August 2014, Chief Operating Officer of Touchstone Exploration Inc. Prior thereto, from November 2011 until March, 2013, Vice President and Chief Operating Officer of Pace Oil & Gas Ltd. Prior thereto, from April 2002 to November 2011, Mr. Brown held various team lead positions at Encana Corporation both in Canada and in the United States.
David Gillis Alberta, Canada	Chief Financial Officer and Vice President, Finance	Chief Financial Officer and Vice President, Finance of Cequence since July 2009. Prior thereto, from July 2004 to March 2008, Treasurer of Cyries Energy Inc. (" Cyries "), a public oil and gas company.
James Jackson Alberta, Canada	Vice President, Engineering	Vice President, Engineering of Cequence since September 2010. Prior thereto, from August 2007 to September 2010, Vice-President Exploitation and Planning of Temple Energy Corp. Prior thereto, from July 2004 to July 2007, Senior Exploitation Engineer of Temple Energy Corp.
David Robinson Alberta, Canada	Vice President, Geology	Vice President, Geology of Cequence since September 2010. Prior thereto, from July 2004 to September 2010, Vice President and Chief Geologist of Temple Energy Corp.
Christopher Soby Alberta, Canada	Vice President, Land	Vice President, Land of Cequence since September 2010. Prior thereto, from July 2004 to September 2010, Vice President, Land and Business Development of Temple Energy Corp.
Michael Stewart Alberta, Canada	Vice President, Operations	Vice President, Operations of Cequence since September 2010. Prior thereto, from August 2007 to September 2010, Vice President, Operations

<u>Name and Residence</u>	<u>Position(s) with Cequence</u>	<u>Principal Occupation(s)</u>
		of Temple Energy Corp. Prior thereto, from May 2006 to August 2007, Manager, Drilling & Completions of ProspEx Resources. Prior thereto, from December 2001 to May 2006, Senior Reservoir Engineer/Manager Engineering of Burlington Resources.
Stephen Stretch Alberta, Canada	Vice President, Geophysics	Vice President, Geophysics of Cequence since September 2010. Prior thereto, Vice President and Chief Geophysicist of Temple Energy Corp. from July 2004 to September 2010.
Erin Thorson Alberta, Canada	Controller	Controller of Cequence since July 2009. Prior thereto, from June 2004 to March 2008, Chief Financial Officer and Controller of Cyries.
Kirk Litvenenko Alberta, Canada	Corporate Secretary	Partner of Norton Rose Fulbright Canada LLP.
Donald Archibald ⁽¹⁾⁽²⁾⁽³⁾ Alberta, Canada	Chairman and Director	Independent businessman since March 2008. Prior thereto, from June 2004 to March 2008, Chairman and Chief Executive Officer of Cyries.
Peter Bannister ⁽³⁾⁽⁴⁾ Alberta, Canada	Director	President of Destiny Energy Inc., a private oil and gas company, since February 2007. Prior thereto, from January 2006 to February 2007, Vice-President, Exploration of Mission Oil and Gas Inc. Prior thereto, from April 2004 to January 2005, Vice President, Exploration of StarPoint Energy Ltd., a public oil and gas company.
Robert Cook ⁽¹⁾⁽⁴⁾ Alberta, Canada	Director	Senior Vice-President, Exploration and Production Group of ARC Financial Corporation, a private equity management company, since March 2000.
Howard Crone Alberta, Canada	Director	Independent businessman since August 2014. Prior thereto, from September 2010 to August 2014, Executive Vice President and Chief Operating Officer of Cequence. Prior thereto, from July 2009 to September 2010, President and Chief Executive Officer of Cequence. Prior thereto, from July 2004 to May 2009, an independent businessman.
Brian Felesky Q.C. O.C. ⁽¹⁾⁽²⁾⁽⁵⁾ Alberta, Canada	Director	Independent businessman since October 2014. Prior thereto, from February 2011 until September 2014, Mr. Felesky was the Vice Chairman, Investment Banking of Credit Suisse Securities (Canada), Inc., an investment banking firm. Prior thereto, from July 2006 to February 2011, Mr. Felesky was Counsel to the law firm of Felesky Flynn LLP. Prior thereto, from April 1978 to July 2006, Mr. Felesky was a Partner of Felesky Flynn LLP.
Daryl Gilbert Alberta, Canada ⁽⁴⁾⁽⁶⁾	Director	Managing Director and Investment Committee Member of JOG Capital Inc. since May 2008. Prior thereto, from January 2005 to May 2008, independent businessman. Prior thereto, from 1994 to 2005, President and Chief Executive Officer of Gilbert Laustsen Jung Associates Ltd., an engineering consulting firm.
Francesco Mele ⁽³⁾⁽⁴⁾ Alberta, Canada	Director	Partner of KERN Partners Ltd. since May 2008. Prior thereto, from September 2005 to February 2008, Managing Director, Investment Banking of CIBC World Markets Inc.

Notes:

- (1) Member of the Audit Committee.
- (2) Member of the Compensation Committee.
- (3) Member of the Nominating and Corporate Governance Committee.
- (4) Member of the Reserves and Environment, Health & Safety Committee.
- (5) Mr. Felesky was a director of RS Technologies Inc. ("**RST**") from February 2007 until March 2013. On March 14, 2013, RST was granted protection under CCAA and a monitor (the "**Monitor**") was appointed. On September 13, 2013, RST announced that in accordance with a court-sanctioned order obtained by the Monitor, RST's Plan of Arrangement had been implemented and that, as a result, RST had emerged from its CCAA proceedings.
- (6) Mr. Gilbert was a director of Globel Direct Inc. ("**Globel**") from May 1998 until the present. On November 20 and November 22, 2002 the British Columbia Securities Commission and the Alberta Securities Commission, respectively, issued cease trade orders due to Globel's failure to file its financial statements. The required financial statements were filed and the cease trade orders were revoked on December 23, 2002. On June 12, 2007, the Court of Queen's Bench of Alberta granted an initial order to Globel for creditor protection under the CCAA. Such protection expired on December 7, 2007, the monitor was discharged on December 12, 2007 and a receiver manager was appointed.

Messrs. Crone, Archibald and Bannister have been directors since July 2009. Mr. Mele has been a director since June 2010. Messrs. Cook, Felesky and Wanklyn have been directors since September 2010. Mr. Gilbert has served as a director since October 2012. Each of the directors has been elected or appointed to serve as such until the next annual meeting of the Shareholders or until his successor is duly elected or appointed, unless his office is earlier vacated in accordance with the articles or by-laws of the Company.

As of the date hereof, the directors and executive officers of Cequence as a group beneficially owned, directly or indirectly, or exercised control or direction over 15,512,837 Shares representing 7.35 percent of the issued and outstanding Shares. In addition, Mr. Mele is a Partner of KERN Partners Ltd., an affiliate of KERN Energy Partners Management Ltd. and KERN Energy Partners Management II Ltd., which collectively, hold 12,756,456 Shares, representing approximately 6.04 percent of the currently outstanding Shares. In addition, Mr. Cook is an officer of ARC Financial Corporation, an affiliate of ARC Equity Management (Fund 3) Ltd. and ARC Energy Venture Fund 4, which collectively, hold 17,960,127 Shares, representing approximately 8.51 percent of the currently outstanding Shares. In addition, Mr. Gilbert is a Managing Director of JOG Capital Inc., an affiliate of JOG Limited Partnership No. III, JOG Limited Partnership No. IV and JOG Limited Partnership No. V which collectively, hold 28,845,874 Shares, representing approximately 13.67 percent of the currently outstanding Shares. The directors and executive officers of Cequence, as a group, hold Options to purchase 14,062,500 Shares and RSUs to receive 203,331 Shares.

Corporate Cease Trade Orders or Bankruptcies

To the knowledge of management, except as otherwise disclosed herein, no director or executive officer of Cequence is, or has been, within the past 10 years before the date hereof, a director or executive officer of any issuer that, while that person was acting in that capacity: (i) was the subject of a cease trade or similar order or an order that denied the issuer access to any exemption under securities legislation for a period of more than 30 consecutive days; or (ii) was subject to an event that resulted, after the person ceased to be a director or executive officer, in the issuer being the subject of a cease trade or similar order or an order that denied the issuer access to any exemption under securities legislation for a period of more than 30 consecutive days.

To the knowledge of management, except as otherwise disclosed herein, no director, executive officer of Cequence is, or has been, within the past 10 years before the date hereof, a director or executive officer of any issuer that, while that person was acting in that capacity or within a year of that person ceasing to act in that capacity, became bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency or was subject to or instituted any proceedings, arrangement or compromise with creditors or had a receiver, receiver manager or trustee appointed to hold its assets.

Personal Bankruptcies

To the knowledge of management, no director, executive officer of Cequence has, within the 10 years before the date hereof, become bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency, or became subject to or instituted any proceedings, arrangement or compromise with creditors, or had a receiver, receiver manager or trustee appointed to hold such person's assets.

Penalties or Sanctions

To the knowledge of management, no director nor executive officer of Cequence has: (i) been subject to any penalties or sanctions imposed by a court relating to securities legislation or by a securities regulatory authority or has entered into a settlement agreement with a securities regulatory authority, other than penalties for late filing of insider reports; or (ii) been subject to any other penalties or sanctions imposed by a court or regulatory body that would likely be considered important to a reasonable investor in making an investment decision.

Conflicts of Interest

Circumstances may arise where Board members are directors or officers of corporations which are in competition to the interests of Cequence. No assurances can be given that opportunities identified by such Board members will be provided to Cequence. Pursuant to the ABCA, directors who have an interest in a proposed transaction upon which the Board is voting are required to disclose their interests and refrain from voting on the transaction.

AUDIT COMMITTEE

Composition of the Audit Committee

The Audit Committee of the Board operates under written terms of reference that set out its responsibilities and composition requirements. A copy of the terms of reference is attached to this Annual Information Form as

Appendix "C". The Audit Committee consists of Messrs. Archibald, Cook and Felesky (Chairman). All members of the Audit Committee are independent and financially literate (as determined by National Instrument 52-110 - *Audit Committees*).

In considering criteria for the determination of financial literacy, the Board looked at the ability to read and understand a balance sheet, an income statement and cash flow statement of a public company as well as the director's past experience in reviewing or overseeing the preparation of financial statements. The following sets out the education and experience of each director relevant to the performance of his duties as a member of the Audit Committee.

Donald Archibald

Mr. Archibald has over 20 years experience in the oil and gas industry. Mr. Archibald also currently serves as a director for a number of public and private companies. Mr. Archibald holds a Bachelor of Commerce degree and a Masters in Business Administration degree. For more information with respect to Mr. Archibald's principal occupations during the past five years, see "Directors and Officers" in this Annual Information Form.

Robert Cook

Mr. Cook is the Senior Vice-President, Exploration and Production Group of ARC Financial Corporation and has over 20 years experience in the financial and oil and gas industries. Mr. Cook currently also serves as a director for various public and private companies. Mr. Cook holds a Bachelor of Engineering and Management degree and a Masters in Business Administration degree and is a CFA Charterholder. For more information with respect to Mr. Cook's principal occupations during the past five years, see "Directors and Officers" in this Annual Information Form.

Brian Felesky Q.C. O.C.

Mr. Felesky is the former Vice-Chair, Investment Banking of Credit Suisse Securities (Canada), Inc. and has over 30 years experience as a tax lawyer involved in structuring company financings, reorganizations, acquisitions and dispositions. Mr. Felesky currently also serves as a director for various public and private companies. Mr. Felesky holds a Bachelor of Arts degree and a Bachelor of Laws degree. For more information with respect to Mr. Felesky's principal occupations during the past five years, see "Directors and Officers" in this Annual Information Form.

Auditors' Fees

Deloitte LLP, Chartered Accountants, became Cequence's auditors on December 1, 2009. Fees paid to Cequence's auditors for the years ended December 31, 2014 and 2013 are detailed below:

Fee	For the year ended December 31, 2014	For the year ended December 31, 2013
Audit Fees ⁽¹⁾	206,000	\$189,500
Audit-Related Fees ⁽²⁾	-	3,000
Tax Fees ⁽³⁾	34,500	15,000
All Other Fees ⁽⁴⁾	-	-
Total	240,500	\$207,500

Notes:

- (1) "Audit-Related Fees" include the aggregate fees billed by external auditor in respect of the financial year.
- (2) "Audit-Related Fees" include the aggregate fees billed for assurance and related services by the external auditor that are reasonably related to the performance of the audit or review of the Company's financial statements and are not included under "Audit Fees".
- (3) "Tax Fees" include the aggregate fees paid to external auditors for tax compliance, tax advice, tax planning and advisory services, including namely preparation of tax returns.
- (4) "Other Fees" include fees for assurance procedures in connection with filings statements and information circulars and services related to underwriter's due diligence.

All permissible categories of non-audit services require pre-approval by the Audit Committee, subject to certain statutory exemptions.

RISK FACTORS

Exploration, Development and Production Risks

Oil and natural gas operations involve many risks that even a combination of experience, knowledge and careful evaluation may not be able to overcome. The long term commercial success of the Company depends on its ability to find, acquire, develop and commercially produce oil and natural gas reserves. Without the continual addition of new reserves, any existing reserves the Company may have at any particular time and the production therefrom will decline over time as such existing reserves are exploited. A future increase in the Company's reserves will depend not only on its ability to explore and develop any properties it may have from time to time, but also on its ability to select and acquire suitable producing properties or prospects. No assurance can be given that the Company will be able to continue to locate satisfactory properties for acquisition or participation. Moreover, if such acquisitions or participations are identified, the Company may determine that current markets, terms of acquisition and participation, pricing or cost conditions make such acquisitions or participations uneconomic. There is no assurance that further commercial quantities of oil and natural gas will be discovered or acquired by the Company.

Future oil and natural gas exploration may involve unprofitable efforts, not only from dry wells, but from wells that are productive but do not produce sufficient net revenues to return a profit after drilling, operating and other costs. Completion of a well does not assure a profit on the investment or recovery of drilling, completion and operating costs. In addition, drilling hazards or environmental damage could greatly increase the cost of operations, and various field operating conditions may adversely affect the production from successful wells. These conditions include delays in obtaining governmental approvals or consents, shut-ins of connected wells resulting from extreme weather conditions, insufficient storage or transportation capacity or other geological or mechanical conditions.

To the extent the Company is not the operator of its oil and gas properties, the Company is dependent on such operators for the timing of activities related to such properties and will be largely unable to direct or control the activities of the operators.

While diligent well supervision and effective maintenance operations can contribute to maximizing production rates over time, production delays and declines from normal field operating conditions cannot be eliminated and can be expected to adversely affect revenue and cash flow levels to varying degrees.

Oil and natural gas exploration, development and production operations are subject to all the risks and hazards typically associated with such operations, including, but not limited to, hazards such as fire, explosion, blowouts, cratering, sour gas releases and spills, each of which could result in substantial damage to oil and natural gas wells, pipelines, production facilities, other property and the environment or in personal injury. In accordance with standard industry practice, the Company is not fully insured against all of these risks, nor are all such risks insurable. Although the Company maintains liability insurance in an amount that it considers consistent with industry practice, the nature of these risks is such that liabilities could exceed policy limits, in which event the Company could incur significant costs that could have a material adverse effect upon its financial condition. Oil and natural gas production operations are also subject to all the risks typically associated with such operations, including encountering unexpected formations or pressures, premature decline of reservoirs and the invasion of water into producing formations. Losses resulting from the occurrence of any of these risks could have a material adverse effect on future results of operations, liquidity and financial condition.

Prices, Markets and Marketing

Oil, NGL and natural gas are commodities whose prices are determined based on world demand, supply and other factors, all of which are beyond the control of the Company. World prices for oil and natural gas have fluctuated widely in recent years and in particular over the past six months and are determined by supply and demand factors and a variety of other factors which are beyond the Company's control, including without limitation, worldwide and domestic supplies of, and demand for, oil, NGL and natural gas; price levels and expectations about future prices of oil, NGL and natural gas; the price and level of foreign imports; OPEC's policies and actions; speculative trading in oil, NGL and natural gas derivative contracts; conflict in oil and natural gas producing regions, including the Middle East, Africa, South America and Russia; and the overall domestic and global economic environment. Oil, NGL and natural gas prices are expected to remain volatile and at relatively low prices for the near future because of market uncertainties over the supply and the demand of these commodities due to the current state of the world

economies, OPEC policies and actions and sanctions imposed on certain oil producing nations by other countries and ongoing credit and liquidity concerns. Any material decline in prices could result in a reduction of net production revenue. Certain wells or other projects may become uneconomic as a result of a decline in world oil prices and natural gas prices, leading to a reduction in the volume of the Company's oil and gas reserves. The Company might also elect not to produce from certain wells at lower prices. All of these factors could result in a material decrease in the Company's future net production revenue, causing a reduction in its oil and gas acquisition and development activities. In addition, bank borrowings available to the Company are in part determined by the borrowing base of the Company. A sustained material decline in prices from historical average prices could limit or reduce the Company's borrowing base, therefore reducing the bank credit available to the Company, and could require that a portion of any existing bank debt of the Company be repaid.

In addition to establishing markets for its oil and natural gas, the Company must also successfully market its oil and natural gas to prospective buyers. The marketability and price of oil and natural gas which may be acquired or discovered by the Company will be affected by numerous factors beyond its control. The Company will be affected by the differential between the price paid by refiners for light quality oil and the grades of oil produced by the Company. The ability of the Company to market its natural gas may depend upon its ability to acquire space on pipelines which deliver natural gas to commercial markets. The Company will also likely be affected by deliverability uncertainties related to the proximity of its reserves to pipelines and processing facilities and related to operational problems with such pipelines and facilities and extensive government regulation relating to price, taxes, royalties, land tenure, allowable production, the export of oil and natural gas and many other aspects of the oil and natural gas business. The Company has limited direct experience in the marketing of oil and natural gas.

The lack of firm pipeline capacity continues to affect the oil and natural gas industry and can limit the ability to produce and to market natural gas production and NGLs. For a significant percentage of its production volumes, Cequence has an agreement with Aux Sable Canada LP and the Alliance Pipeline Limited Partnership to ship natural gas on the Alliance pipeline with NGL extraction at the Aux Sable processing facility. The Company continues to evaluate alternatives to market its natural gas and NGLs once this agreement expires in November 2015. In addition, the pro-rationing of capacity on the inter provincial pipeline systems also continues to affect the ability to export oil and natural gas.

Global Financial Environment

The market events and conditions witnessed over the past several years, including disruptions in the international credit markets and other financial systems, the deterioration of global economic conditions, and the American and European sovereign debt levels, have caused significant volatility to and reductions in commodity prices.

These events and conditions have caused a decrease in confidence in the broader United States and global credit and financial markets and have created a climate of greater volatility, less liquidity, widening of credit spreads, a lack of price transparency, increased credit losses and tighter credit conditions. Notwithstanding various actions by governments, concerns about the general condition of the capital markets, financial instruments, banks, investment banks, insurers and other financial institutions caused the broader credit markets to further deteriorate and stock markets to decline substantially. These factors have negatively impacted company valuations and are likely to continue to impact the performance of the global economy going forward. Worldwide crude oil commodity prices are expected to remain volatile in the near future as a result of global excess supply, recent actions taken OPEC, and ongoing global credit and liquidity concerns. This volatility may affect the Company's ability to obtain equity or debt financing on acceptable terms.

To the extent that external sources of capital become limited or unavailable or available on unfavourable terms, the Company's ability to make capital investments and maintain existing properties may be constrained, and, as a result, Cequence's business, financial condition, results of operations and cash flow may be materially adversely affected.

Market Price of Shares

The trading price of securities of oil and natural gas issuers is subject to substantial volatility often based on factors related and unrelated to the financial performance or prospects of the issuers involved. Factors unrelated to the Company's performance could include macroeconomic developments nationally, within North America or globally, domestic and global commodity prices or current perceptions of the oil and gas market. Similarly, the market price

of the Shares could be subject to significant fluctuations in response to variations in the Company's operating results, financial condition, liquidity and other internal factors. Accordingly, the price at which the Shares will trade cannot be accurately predicted.

Failure to Realize Anticipated Benefits of Acquisitions and Dispositions

The Company makes acquisitions and dispositions of businesses and assets in the ordinary course of business. Achieving the benefits of acquisitions depends in part on successfully consolidating functions and integrating operations and procedures in a timely and efficient manner as well as the Company's ability to realize the anticipated growth opportunities and synergies from combining the acquired businesses and operations with those of Cequence. The integration of acquired businesses may require substantial management effort, time and resources and may divert management's focus from other strategic opportunities and operational matters. Management continually assesses the value and contribution of services provided and assets required to provide such services. In this regard, non-core assets are periodically disposed of, so that the Company can focus its efforts and resources more efficiently. Depending on the state of the market for such non-core assets, certain non-core assets of the Company, if disposed of, could be expected to realize less than their carrying value on the financial statements of the Company.

Variations in Foreign Exchange Rates and Interest Rates

World oil and natural gas prices are quoted in United States dollars and the price received by Canadian producers is therefore affected by the Canadian/United States dollar exchange rates, which fluctuates over time. Material increases in the value of the Canadian dollar negatively impact the Company's production revenues. Future Canadian/United States dollar exchange rates could accordingly impact the future value of the Company's reserves as determined by independent evaluators.

To the extent that the Company engages in risk management activities related to foreign exchange rates, there is a credit risk associated with counterparties with which the Company may contract.

An increase in interest rates could result in a significant increase in the amount the Company pays to service debt, which could negatively impact the market price of the Shares.

Regulatory

Oil and gas operations (exploration, production, pricing, marketing and transportation) are subject to extensive controls and regulations imposed by various levels of government that may be amended from time to time. See "Industry Conditions" in this Annual Information Form. The Company's operations may require licenses and permits from various governmental authorities. There can be no assurance that the Company will be able to obtain or review all necessary licenses and permits that may be required to carry out exploration and development of its projects and the obtaining of such licences and permits may delay operations of the Company. Changes to the regulation of the oil and gas industry in jurisdictions in which the Company operates may adversely impact the Company's ability to economically develop existing reserves and add new reserves.

Environmental

All phases of the oil and natural gas business present environmental risks and hazards and are subject to environmental regulation pursuant to a variety of international conventions and national, provincial, state and local laws and regulations. Environmental legislation provides for, among other things, restrictions and prohibitions on spills, releases or emissions of various substances produced in association with oil and gas operations. The legislation also requires that wells and facility sites be operated, maintained, abandoned, remediated and reclaimed to the satisfaction of applicable regulatory authorities. Compliance with such legislation can require significant expenditures and a breach of same can result in the imposition of clean-up orders, fines and/or penalties, some of which may be material, as well as possible suspension or forfeiture of requisite licenses or permits obtained from the various governmental authorities. The release of GHG emissions and other pollutants into the air, soil or water may give rise to liabilities to governments and third parties and may require the Company to incur costs to remedy such discharge. Although the Company believes that it is in material compliance with current applicable environmental laws and regulations, no assurance can be given that environmental laws and regulations will not result in a curtailment of production or a material increase in the costs of production, development or exploration activities or

otherwise adversely affect the Company's financial condition, results of operations or prospects. See "Industry Conditions - Environmental Regulation" in this Annual Information Form.

Substantial Capital Requirements

The Company anticipates making substantial capital expenditures for the acquisition, exploration, development and production of oil and natural gas reserves in the future. In the event the Company's revenues or reserves decline, the Company may have limited ability to expend the capital necessary to undertake or complete future drilling programs. There can be no assurance that debt or equity financing or cash generated by operations will be available or sufficient to meet these requirements or for other corporate purposes or, if debt or equity financing is available, that it will be on terms acceptable to the Company. The inability of the Company to access sufficient capital for its operations could have a material adverse effect on the Company's financial condition, results of operations or prospects.

Additional Funding Requirements

The Company's cash flow from its reserves may not be sufficient to fund its ongoing activities at all times. From time to time, the Company may require additional financing in order to carry out its oil and gas acquisition, exploration and development activities. Failure to obtain such financing on a timely basis could cause the Company to forfeit its interest in certain properties, miss certain acquisition opportunities and reduce or terminate its operations. If the Company's revenues from its reserves decrease as a result of lower oil and natural gas prices or otherwise, it will affect the Company's ability to expend the necessary capital to replace its reserves or to maintain its production. If the Company's cash flow from operations is not sufficient to satisfy its capital expenditure requirements, there can be no assurance that additional debt or equity financing to meet these requirements will be available at all or on terms acceptable to the Company.

Reserve Estimates

There are numerous uncertainties inherent in estimating quantities of oil, natural gas and NGL reserves and cash flows to be derived therefrom, including many factors beyond the Company's control. The reserve and associated cash flow information set forth in this Annual Information Form represents estimates only. In general, estimates of economically recoverable oil and natural gas reserves and the future net cash flows therefrom are based upon a number of variable factors and assumptions, such as historical production from the properties, future commodity prices, production rates, ultimate reserve recovery, timing and amount of capital expenditures, marketability of oil, natural gas and NGL, royalty rates, the assumed effects of regulation by governmental agencies and future operating costs, all of which may vary from actual results. All such estimates are to some degree speculative, and classifications of reserves are only attempts to define the degree of speculation involved. For those reasons, estimates of the economically recoverable oil and natural gas reserves attributable to any particular group of properties, classification of such reserves based on risk of recovery and estimates of future net revenues expected therefrom prepared by different engineers, or by the same engineers at different times, may vary. The Company's actual production, revenues, taxes and development and operating expenditures with respect to its reserves will vary from estimates thereof and such variations could be material.

Estimates of proved reserves that may be developed and produced in the future are often based upon volumetric calculations and upon analogy to similar types of reserves rather than actual production history. Estimates based on these methods are generally less reliable than those based on actual production history. Subsequent evaluation of the same reserves based upon production history and production practices will result in variations in the estimated reserves and such variations could be material.

In accordance with applicable securities laws, GLJ has used forecast price and cost estimates in calculating reserve quantities included herein. Actual future net revenue will be affected by other factors such as actual production levels, supply and demand for oil and natural gas, curtailments or increases in consumption by oil and natural gas purchasers, changes in governmental regulation or taxation and the impact of inflation on costs.

Actual production and revenues derived therefrom will vary from the estimates contained in the GLJ Report and such variations could be material. The GLJ Report is based in part on the assumed success of activities the Company intends to undertake in future years. The reserves and estimated cash flows to be derived therefrom contained in the

GLJ Report will be reduced to the extent that such activities do not achieve the level of success assumed in the GLJ Report.

Royalty Rates

The potential for additional future changes and corresponding changes in the royalty regimes applicable in the provinces of Alberta and British Columbia, have created uncertainty surrounding the ability to accurately estimate future royalties, resulting in additional volatility and uncertainty in the oil and gas market. Increases to royalty rates in jurisdictions in which the Company operates may negatively impact the Company's results from operations and its ability to economically develop existing reserves or add new reserves.

Competition

Oil and natural gas exploration is intensely competitive in all of its phases and involves a high degree of risk. The Company competes with numerous other participants in the search for, and the acquisition of, oil and natural gas properties and in the marketing of oil and natural gas. The Company's competitors include oil and natural gas companies that have substantially greater financial resources, staff and facilities than those of the Company. The Company's ability to increase reserves in the future will depend not only on its ability to explore and develop its present properties, but also on its ability to select and acquire suitable producing properties or prospects for exploratory drilling. Competitive factors in the distribution and marketing of oil and natural gas include price and methods and reliability of delivery. Competition may also be presented by alternate fuel sources.

Availability of Drilling Equipment and Access

Oil and natural gas exploration and development activities are dependent on the availability of drilling and related equipment in the particular areas where such activities will be conducted. Demand for such limited equipment or access restrictions may affect the availability of such equipment to the Company and may delay exploration and development activities. To the extent the Company is not the operator of its oil and gas properties, the Company will be dependent on such operators for the timing of activities related to such properties and will be largely unable to direct or control the activities of the operators.

Title to Assets

It is the practice of the Company when acquiring significant oil and gas leases or interest in oil and gas leases to examine the title to the interest under the lease. In the case of minor acquisitions the Company may rely upon the judgment of oil and gas lease brokers or landmen who perform the field work in examining records in the appropriate governmental office before attempting to place under lease a specific interest. The Company believes that this practice is widely followed in the oil and gas industry. Nevertheless, there may be title defects which affect lands comprising a portion of the Company's properties which may adversely affect the Company.

Hedging

From time to time the Company may enter into agreements to receive fixed prices on its oil and natural gas production to offset the risk of revenue losses if commodity prices decline; however, if commodity prices increase beyond the levels set in such agreements, the Company will not benefit from such increases. Similarly, from time to time the Company may enter into agreements to fix the exchange rate of Canadian to United States dollars in order to offset the risk of revenue losses if the Canadian dollar increases in value compared to the United States dollar; however, if the Canadian dollar declines in value compared to the United States dollar, the Company would not benefit from the fluctuating exchange rate for the fixed price agreement amount.

Issuance of Debt

From time to time the Company may enter into transactions to acquire assets or the shares of other corporations. These transactions may be financed partially or wholly with debt, which may increase the Company's debt levels above industry standards. Depending on future exploration and development plans, the Company may require additional equity and/or debt financing that may not be available or, if available, may not be available on favourable terms. Neither the Company's articles nor its by-laws limit the amount of indebtedness that the Company may incur.

The level of the Company's indebtedness from time to time, could impair the Company's ability to obtain additional financing in the future on a timely basis to take advantage of business opportunities that may arise.

Credit Risk

The majority of the Company's accounts receivable are due from joint venture partners in the oil and gas industry and from purchasers of the Company's petroleum and natural gas production and are subject to the same industry factors such as commodity price fluctuations and escalating costs. The Company generally extends unsecured credit to these customers and therefore, the collection of accounts receivable may be affected by changes in economic or other conditions.

Seasonal Impact on Industry

The level of activity in the Canadian oil and gas industry is influenced by seasonal weather patterns. Wet weather and spring thaw may make the ground unstable. Consequently, municipalities and provincial transportation departments may at times restrict the movement of drilling rigs and other heavy equipment, thereby reducing activity levels. Also, certain oil and natural gas producing areas are located in areas that are inaccessible other than during the winter months because the ground surrounding the sites in these areas consists of swampy terrain. Seasonal factors and unexpected weather patterns may lead to declines in exploration and production activity and corresponding declines in the demand for the oil, natural gas and NGL produced by Cequence.

Conflicts of Interest

There are potential conflicts of interest to which some of the directors and officers of the Company will be subject in connection with the operations of the Company. Some of the directors and officers are engaged and will continue to be engaged in the search of oil and gas interests on their own behalf and on behalf of other corporations, and situations may arise where the directors and officers will be in direct competition with the Company.

Conflicts of interest, if any, which arise will be subject to and be governed by procedures prescribed by the ABCA which require a director or officer of a corporation who is a party to or is a director or an officer of or has a material interest in any person who is a party to a material contract or proposed material contract with the Company, to disclose his interest and to refrain from voting on any matter in respect of such contract unless otherwise permitted under the ABCA.

Reliance on Key Personnel

The Company's success depends in large measure on certain key personnel. The loss of the services of such key personnel could have a material adverse affect on the Company. The Company does not have key person insurance in effect for management. The contributions of these individuals to the immediate operations of the Company are likely to be of central importance. In addition, the competition for qualified personnel in the oil and natural gas industry is intense and there can be no assurance that the Company will be able to continue to attract and retain all personnel necessary for the development and operation of its business. Investors must rely upon the ability, expertise, judgment, discretion, integrity and good faith of the management of the Company.

Expiration of Licences and Leases

The Company's properties are held in the form of licences and leases and working interests in licences and leases. If the Company or the holder of the licence or lease fails to meet the specific requirements of a licence or lease, the licence or lease may terminate or expire. There can be no assurance that any of the obligations required to maintain each licence or lease will be met. The termination or expiration of the Company's licences or leases or the working interests relating to a licence or lease may have a material adverse effect on the Company's results of operations and business.

Management of Growth

The Company may be subject to growth related risks including capacity constraints and pressure on its internal systems and controls. The ability of the Company to manage growth effectively will require it to continue to

implement and improve its operational and financial systems and to expend, train and manage its employee base. The inability of the Company to deal with this growth could have a material adverse impact on its business, operations and prospects.

Insurance

The Company's involvement in the exploration for and development of oil and natural gas properties may result in the Company becoming subject to liability for pollution, blow outs, property damage, personal injury or other hazards. Although prior to drilling the Company will obtain insurance in accordance with industry standards to address certain of these risks, such insurance has limitations on liability that may not be sufficient to cover the full extent of such liabilities. In addition, such risks may not in all circumstances be insurable or, in certain circumstances, the Company may elect not to obtain insurance to deal with specific risks due to the high premiums associated with such insurance or other reasons. The payment of such uninsured liabilities would reduce the funds available to the Company. The occurrence of a significant event that the Company is not fully insured against, or the insolvency of the insurer of such event, could have a material adverse effect on the Company's financial position, results of operations or prospects.

Breach of Confidentiality

While discussing potential business relationships or other transactions with third parties, the Company may disclose confidential information relating to the business, operations or affairs of the Company. Although confidentiality agreements are signed by third parties prior to the disclosure of any confidential information, a breach could put the Company at competitive risk and may cause significant damage to its business. The harm to the Company's business from a breach of confidentiality cannot presently be quantified, but may be material and may not be compensable in damages. There is no assurance that, in the event of a breach of confidentiality, the Company will be able to obtain equitable remedies, such as injunctive relief, from a court of competent jurisdiction in a timely manner, if at all, in order to prevent or mitigate any damage to its business that such a breach of confidentiality may cause.

Alternatives to and Changing Demand for Petroleum Products

Full conservation measures, alternative fuel requirements, increasing consumer demand for alternatives to oil and natural gas and technological advances in fuel economy and energy generation devices could reduce the demand for oil, natural gas and other liquid hydrocarbons. The Company cannot predict the impact of changing demand for oil and natural gas products, and any major changes may have a material adverse effect on the Company's business, financial condition, results of operations and cash flows.

INDUSTRY CONDITIONS

The oil and natural gas industry is subject to extensive laws and regulations governing its operations (including land tenure, exploration, development, production, refining, transportation, and marketing) imposed by various levels of governments and with respect to pricing and taxation of oil and natural gas by agreements among the Governments of Canada, Alberta and British Columbia, all of which should be carefully considered by investors in the oil and gas industry. It is not expected that any of these laws or regulations will affect the Company's operations in a manner materially different than they would affect other oil and gas companies of similar size. All current laws and regulations are a matter of public record and the Company is unable to predict what additional laws and regulations or amendments may be enacted. Outlined below are some of the principal aspects of the legislation, regulations and agreements governing the oil and gas industry.

Pricing and Marketing

In Canada, oil producers negotiate sales contracts directly with oil purchasers with the result that the market determines the price of oil. The price depends in part on oil quality, prices of competing fuels, distance to market, and the value of refined products. Oil exports may be made under export contracts having terms not exceeding one year in the case of light oil, and not exceeding two years in the case of heavy oil, provided that an order approving any such export has been approved by the NEB. Any oil export to be made pursuant to a contract of longer duration requires an exporter to obtain an export licence from the NEB and the issue of such a licence requires the approval of the Government of Canada.

In Canada, the price of natural gas and NGL sold is determined by negotiation between buyers and sellers. Natural gas and NGL exported from Canada is subject to regulation by the NEB and the Government of Canada. Exporters are free to negotiate prices and other terms with purchasers, provided that export contracts in excess of two years must continue to meet certain criteria prescribed by the NEB and the Government of Canada. Natural gas exports for a term of less than two years must be made pursuant to an NEB order, or, in the case of exports for a longer duration, pursuant to an NEB licence and Government of Canada approval.

The provincial governments of Alberta and British Columbia also regulate the removal of gas from their jurisdictions for consumption elsewhere based upon such factors as reserve availability, transportation arrangements and market considerations.

Royalties

Alberta and British Columbia each have legislation and regulations which govern royalties. The royalty regime is a significant factor in the profitability of oil and natural gas production. Crown royalties are determined by governmental regulation and are generally calculated as a percentage of the value of the gross production, and the royalty rate payable generally depends in part on the prescribed reference prices for the oil and natural gas, well productivity, geographical location, field discovery date, method of recovery and the type or quality of the petroleum product produced.

Royalties payable on production from lands other than Crown lands are determined by negotiation between the mineral freehold owner and the lessee, although production from such lands is subject to certain provincial taxes and royalties. Other royalties and royalty-like interests are, from time to time, carved out of the working interest owner's interest through non-public transactions. These are often referred to as overriding royalties, gross overriding royalties, net profits interests, or net carried interests.

Competitive Conditions

The oil and natural gas industry in Canada is intensely competitive in all of its phases. Cequence competes with a substantial number of other companies that may have greater technical or financial resources. Many such companies not only explore for and produce oil and natural gas, but also carry on refining operations and market oil and other products on a worldwide basis. Generally there is intense competition for the acquisition of undeveloped or producing resource properties considered to have commercial potential. Prices paid for oil and natural gas properties are subject to market fluctuations and will directly affect the profitability of producing any oil or natural gas reserves that may be acquired or developed by the Company.

Environmental Regulation

Federal

Canada is a signatory to the United Nations Framework Convention on Climate Change and the Kyoto Protocol thereunder but announced in 2011 that it was withdrawing from the Kyoto Protocol. The Canadian federal government originally indicated an intention to regulate the emissions of GHGs from a range of industries in the Framework. The Framework was updated on March 10, 2008 pursuant to the Update. The Federal Plan outlines a number of policies to reduce GHGs intensity of regulated facilities. New facilities (which are defined as those facilities whose first year of operation is 2004 or later) would face intensity reduction requirements beginning in their fourth year of commercial production, of 2% per year from their "baseline" emissions intensity (which baseline is the emissions intensity for such facility's third year of commercial production) until at least 2020. Compliance options for new facilities under the Federal Plan include making emissions intensity improvements; making investments in certified carbon capture and storage projects; buying offsets or emissions performance credits; and for a portion of each entity's emissions reduction obligations, making payments at an escalating annual rate per tonne, to the federal technology fund.

The Federal Plan also includes proposed requirements to be implemented by the Canadian federal government, which would govern the emission of industrial air pollutants. Certain of the proposed requirements include fixed emissions caps, an emissions credit trading system, and several options from which companies can choose to meet their GHG emission reduction targets. At present, the status of its proposals is unclear. The Canadian federal

government has repeatedly stated that it intends to align their GHG emission reduction policies with those of the United States, and it is willing to wait until the United States has developed its framework before implementing any policies here in Canada. As such, and given the current political climate in Washington, it is unclear if, when, or in what form, the Federal Plan will be implemented.

Several of the provinces and territories are working together with various American states to develop a cap and trade system. It remains to be seen whether the Canadian federal government would adopt such an approach, but given its statements regarding aligning policy with the United States, this will likely depend on whether the United States adopts a cap and trade system. No assurance can be given that either a modified Federal Plan or a North American cap and trade system will or will not be implemented, or what kinds of obligations may be imposed under such a system.

In February 2009, the United States and Canada established the 'Clean Energy Dialogue' in order for the two countries to collaborate on the development of clean energy science and technologies to reduce GHG emissions and combat climate change. A number of working groups have been created to develop recommendations for joint initiatives.

At the July 2009 G8 Summit in Italy, Canada and the other G8 members agreed to work together toward achieving at least a 50 percent reduction of global GHG emissions by 2050. Canada reiterated its commitment to this goal at the June 2010 G8 Summit in Huntsville, Ontario.

In December 2009, Canada participated in the COP 15 in Denmark, the goal of which was to reach a new agreement for fighting global climate change. COP 15 resulted in the non-binding Copenhagen Accord, whereby Canada and the other participating countries committed to implementing quantified economy-wide emissions targets by 2020. Canada submitted its GHG emission reduction targets on January 30, 2010, noting that: (a) its target is a 17 percent reduction from a baseline of 2005 emission levels (which target is aligned with the final economy-wide emissions target and base year of the United States); and (b) its submission is dependant on the other parties to the Copenhagen Accord submitting emissions targets and mitigation actions in accordance with such Accord.

There has been much public debate surrounding Canada's ability to meet emission reduction targets and the strategies proposed for controlling climate change and GHG emissions. It is likely that any such strategies which are eventually adopted by the Canadian government will materially impact the nature of oil and gas operations, including those carried out by Cequence. At present, it is not possible to predict the impact such strategies will have on the business, operations and/or finances of Cequence.

Alberta

Environmental legislation in the Province of Alberta has largely been consolidated into the *Environmental Protection and Enhancement Act* (Alberta), the *Water Act* (Alberta), and the *Oil and Gas Conservation Act* (Alberta). These statutes impose environmental standards, require compliance, reporting and monitoring obligations, and impose penalties. In addition, the emission reduction requirements in the *Climate Change and Emissions Management Act* (Alberta) came into effect on July 1, 2007. Under this legislation, Alberta facilities emitting more than 50,000 tonnes of GHG emissions per year must report such emission to Alberta Environment and Water and to Environment Canada while facilities emitting more than 100,000 tonnes of GHG emissions per year must reduce their emissions intensity by 12 percent. The Company has four options to choose from in order to meet the reduction requirements outlined in this legislation, and these are: (i) making improvement to operations that result in reductions; (ii) purchasing emission credits from other sectors or facilities that have reduced their emissions below the required emission intensity reduction levels; (iii) purchasing off-set credits from other sectors or facilities that have emissions below the 100,000 tonne threshold and are voluntarily reducing their emissions in Alberta; or (iv) contributing to the 'Climate Change and Emissions Management Fund'. The Company can choose one of these options or a combination thereof, however it should be noted that the price of off-set credits could be raised, and the required reductions in GHG emissions intensity presently set forth can be increased to unspecified levels.

British Columbia

British Columbia's *Oil and Gas Activities Act* regulates the oil and gas industry, including imposing environmental standards, requiring compliance, reporting and monitoring obligations and imposing penalties.

On February 27, 2007, the Government of British Columbia unveiled the BC Energy Plan, which outlines the province's energy strategy. The BC Energy Plan sets targets for reducing GHG emissions, promoting investments in innovation, and sustainable environmental management. The BC Energy Plan's objectives are to achieve clean energy through conservation and energy efficient practices, and to increase competitiveness in order to attract new investment in the oil and natural gas industry. The changes proposed include: (i) the creation of policies and measures for the reduction of emissions; (ii) the elimination of routine flaring at producing wells; (iii) the establishment of the Innovative Clean Energy Fund, in order to find new technologies that will help solve energy and environmental issues; (iv) a new Oil and Gas Technology Transfer Incentive Program, which encourages the research, development and use of innovative technologies to responsibly develop new oil and natural gas reserves and increase recoveries from existing reserves; and (v) the development of unconventional resources such as tight gas and coalbed gas.

In furtherance of these initiatives, the Government of British Columbia introduced the *Carbon Tax Act* on July 1, 2008. The carbon tax applies to fuels such as gasoline, diesel, natural gas, propane and coal, and it is revenue-neutral, meaning tax revenues will be returned to taxpayers through reductions in other provincial taxes.

On April 3, 2008, the Government of British Columbia introduced the *Greenhouse Gas Reduction (Cap and Trade) Act*, which will allow participation in the Western Climate Initiative cap and trade systems being developed. The proposed system establishes a limit on GHG emissions, and allows regulated emitters to buy/sell GHG emission allowances or offset emits. The emitter is obliged to obtain GHG emission allowances (compliance units) which are equal to the amount of GHG emitted within a certain period of time, which are then to be surrendered to the British Columbia government as proof of compliance.

The North American Free Trade Agreement

NAFTA became effective on January 1, 1994. NAFTA carries forward most of the material energy terms contained in the Canada U.S. Free Trade Agreement. In the context of energy resources, Canada continues to remain free to determine whether exports of energy resources to the United States or Mexico will be allowed, provided that any export restrictions are justified under certain provisions of the General Agreement on Tariffs and Trade, and further provided that any export restrictions do not: (i) reduce the proportion of energy resources exported relative to the total supply of the energy resource (based upon the proportion prevailing in the most recent 36 month period or in such other representative period as the parties may agree), (ii) impose an export price higher than the domestic price subject to an exception with respect to certain measures which only restrict the volume of exports, and (iii) disrupt normal channels of supply. All three countries are prohibited from imposing minimum or maximum export or import price requirements, provided, in the case of export price requirements, prohibition in any circumstances in which any other form of quantitative restriction is prohibited, and in the case of import price requirements, such requirements do not apply with respect to enforcement of countervailing and anti dumping orders and undertakings.

NAFTA contemplates the reduction of Mexican restrictive trade practices in the energy sector and prohibits discriminatory border restrictions and export taxes. NAFTA also contemplates clearer disciplines on regulators to ensure fair implementation of any regulatory changes and to minimize disruption of contractual arrangements and avoid undue interference with pricing, marketing and distribution arrangements, which is important for Canadian natural gas exports.

Land Tenure

Crude oil and natural gas located in the western Canadian provinces is owned predominantly by the respective provincial governments. Provincial governments grant rights to explore for and produce oil and natural gas pursuant to leases, licenses and permits for varying periods and on conditions set forth in provincial legislation including requirements to perform specific work or make payments. Oil and natural gas located in such provinces can also be privately owned and rights to explore for and produce such oil and natural gas are granted by lease on such terms and conditions as may be negotiated.

Seasonality

The level of activity in the Canadian oil and gas industry is influenced by seasonal weather patterns. Wet weather and spring thaw may make the ground unstable. Consequently, municipalities and provincial transportation

departments may at times restrict the movement of drilling rigs and other heavy equipment, thereby reducing activity levels. Also, certain oil and natural gas producing areas are located in areas that are inaccessible other than during the winter months because the ground surrounding the sites in these areas consists of swampy terrain. See "Risk Factors – Seasonal Impact on Industry" in this Annual Information Form.

LEGAL AND REGULATORY PROCEEDINGS

Cequence is not a party to any legal proceeding nor was it a party to, nor is or was any of its property the subject of any legal proceeding, during the financial year ended December 31, 2014, nor is Cequence aware of any such contemplated legal proceedings that involve a claim for damages, exclusive of interest and costs, that may exceed 10 percent of the current assets of Cequence.

During the year ended December 31, 2014, there were no: (i) penalties or sanctions imposed against the Company by a court relating to securities legislation or by a securities regulatory authority; (ii) penalties or sanctions imposed by a court or regulatory body against the Company that would likely be considered important to a reasonable investor in making an investment decision; or (iii) settlement agreements the Company entered into before a court relating to securities legislation or with a securities regulatory authority.

INTEREST OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

Except as disclosed in this Annual Information Form, no director, officer or principal Shareholder, nor any affiliate or associate of such a person, has or has had any material interest in any transaction or any proposed transaction within the three most recently completed financial years or during the current financial year that has materially affected or is reasonably expected to materially affect Cequence.

TRANSFER AGENT AND REGISTRAR

Valiant Trust Company, at its principal offices in Calgary, Alberta and Toronto, Ontario, is the transfer agent and registrar for the Shares.

MATERIAL CONTRACTS

Except for contracts entered into in the ordinary course of business, the Company has not entered into any material contracts within the most recently completed financial year, or before the most recently completed financial year that are still in effect.

INTERESTS OF EXPERTS

Reserve estimates contained in this Annual Information Form have been prepared by GLJ. As at December 31, 2014, the effective date of those estimates, and as of the date hereof, the principals, directors, officers and associates of GLJ, as a group, owned, directly or indirectly, less than one percent of the outstanding Shares.

The auditors of the Company, Deloitte LLP, are independent with respect to the Company, in accordance with the Rules of Professional Conduct of the Institute of Chartered Accountants of Alberta.

ADDITIONAL INFORMATION

Additional information, including information as to directors' and officers' remuneration and indebtedness, principal holders of the Company's securities and securities authorized for issuance under equity compensation plans is contained in the Proxy Statement and Information Circular of the Company prepared in connection with the most recent annual meeting of Shareholder that involved the election of directors. Additional financial information is provided in the Company's financial statements and management discussion and analysis for the year ended December 31, 2014.

Copies of this Annual Information Form, any interim financial statements of the Company subsequent to the annual financial statements, the Company's Proxy Statement and Information Circular and other additional information relating to the Company are available on SEDAR at www.sedar.com.

APPENDIX "A"

FORM 51-101F2

**REPORT ON RESERVES DATA BY
INDEPENDENT QUALIFIED RESERVES EVALUATOR OR AUDITOR**

Terms to which a meaning is ascribed in National Instrument 51-101, Standards of Disclosure for Oil and Gas Activities have the same meaning herein.

To the board of directors of Cequence Energy Ltd. (the "**Company**"):

1. We have evaluated the Company's reserves data as at December 31, 2014. The reserves data are estimates of proved and probable reserves and related future net revenue as at December 31, 2014, estimated using forecast prices and costs.
2. The reserves data are the responsibility of the Company's management. Our responsibility is to express an opinion on the reserves data based on our evaluation.

We carried out our evaluation in accordance with standards set out in the Canadian Oil and Gas Evaluation Handbook (the "**COGE Handbook**") prepared jointly by the Society of Petroleum Evaluation Engineers (Calgary Chapter) and the Canadian Institute of Mining, Metallurgy & Petroleum (Petroleum Society).

3. Those standards require that we plan and perform an evaluation to obtain reasonable assurance as to whether the reserves data are free of material misstatement. An evaluation also includes assessing whether the reserves data are in accordance with principles and definitions presented in the COGE Handbook.
4. The following table sets forth the estimated future net revenue (before deduction of income taxes) attributed to proved plus probable reserves, estimated using forecast prices and costs and calculated using a discount rate of 10 percent, included in the reserves data of the Company evaluated by us for the year ended December 31, 2014, and identifies the respective portions thereof that we have evaluated and reported on to the Company's board of directors.

Independent Qualified Reserves Evaluator	Description and Preparation Date of Evaluation Report	Location of Reserves (Country or Foreign Geographic Area)	Net Present Value of Future Net Revenue (before income taxes, 10% discount rate - \$M)			
			Audited	Evaluated	Reviewed	Total
GLJ Petroleum Consultants	Corporate Summary February 19, 2015	Canada	-	854,223	-	854,223

5. In our opinion, the reserves data respectively evaluated by us have, in all material respects, been determined and are in accordance with the COGE Handbook, consistently applied. We express no opinion on the reserves data that we reviewed but did not audit or evaluate.
6. We have no responsibility to update our reports referred to in paragraph 4 for events and circumstances occurring after their respective preparation dates.
7. Because the reserves data are based on judgements regarding future events, actual results will vary and the variations may be material.

Executed as to our report referred to above:

APPENDIX "B"

FORM 51-101F3

REPORT OF MANAGEMENT AND DIRECTORS ON OIL AND GAS DISCLOSURE

Terms to which a meaning is ascribed in National Instrument 51-101, Standards of Disclosure for Oil and Gas Activities have the same meaning herein.

Management of Cequence Energy Ltd. (the "**Company**") are responsible for the preparation and disclosure of information with respect to the Company's oil and gas activities in accordance with securities regulatory requirements. This information includes reserves data which are estimates of proved and probable reserves and related future net revenue as at December 31, 2014, estimated using forecast prices and costs.

Independent qualified reserves evaluators have evaluated and reviewed the Company's reserves data. The report of the independent qualified reserves evaluators is presented in Appendix "A" to the Annual Information Form of the Company effective as at December 31, 2014.

The Reserves Committee of the Board of Directors of the Company has:

- (a) reviewed the Company's procedures for providing information to the independent qualified reserves evaluators;
- (b) met with the independent qualified reserves evaluators to determine whether any restrictions affected the ability of the independent qualified reserves evaluators to report without reservation; and
- (c) reviewed the reserves data with management and the independent qualified reserves evaluators.

The Reserves Committee of the Board of Directors has reviewed the Company's procedures for assembling and reporting other information associated with oil and gas activities and has reviewed that information with management. The Board of Directors has approved:

- (a) the content and filing with securities regulatory authorities of Form 51-101F1 containing reserves data and other oil and gas information;
- (b) the filing of Form 51-101F2 which is the report of the independent qualified reserves evaluators on the reserves data; and
- (c) the content and filing of this report.

Because the reserves data are based on judgements regarding future events, actual results will vary and the variations may be material.

APPENDIX "C"
AUDIT COMMITTEE TERMS OF REFERENCE

The Audit Committee (the "Committee") of the Board of Directors (the "Board") of Cequence Energy Ltd. (the "Corporation") shall have the oversight responsibility, authority and specific duties as described below.

Composition

The Committee will be comprised of three or more directors as determined by the Board, none of whom shall be an officer or employee of the Corporation or any subsidiary of the Corporation. In addition, each Committee member shall satisfy the independence, financial literacy and experience requirements of applicable securities laws, rules or guidelines, any applicable stock exchange requirements or guidelines and any other applicable regulatory rules. Determinations as to whether a particular director satisfies the requirements for membership on the Committee shall be made by the Board with the assistance of the Corporate Governance and Nominating Committee, if requested by the Board.

Members of the Committee shall be appointed by the Board. The Corporate Governance and Nominating Committee of the Board shall recommend to the Board eligible directors to fill vacancies on the Committee. Each member shall serve until his successor is appointed, unless he shall resign or be removed by the Board or he shall otherwise cease to be a director of the Corporation. The Board shall fill any vacancy if the membership of the Committee is less than three directors.

The Chair of the Committee may be designated by the Board or, if it does not do so, the members of the Committee may elect a Chair by vote of a majority of the full Committee membership.

Communication, Expenses and Authority to Engage Advisors

The Committee shall have access to such officers and employees of the Corporation, the Corporation's external auditor and to such information respecting the Corporation, as it considers to be necessary or advisable in order to perform its duties and responsibilities.

The Committee provides an avenue for communication, particularly for outside directors, with the external auditor and financial and senior management and the Board. The external auditor shall have a direct line of communication to the Committee through its Chair and shall report directly to the Committee. The Committee, through its Chair, may directly contact any employee in the Corporation as it deems necessary, and any employee may bring before the Committee, on a confidential basis, any matter involving the Corporation's financial practices or transactions.

The Committee has the authority to engage independent counsel and other advisors as it determines necessary to carry out its duties and to set the compensation for any such counsel and advisors. Any engagement of independent counsel or other advisors is to be at the Corporation's expense.

The Corporation shall be responsible for all expenses of the Committee that are deemed necessary or appropriate by the Committee in carrying out its duties.

Meetings and Record Keeping

Meetings of the Committee shall be conducted as follows:

- the Committee shall meet at least four times annually at such times and at such locations as the Chair of the Committee shall determine, provided that meetings shall be scheduled so as to permit timely review of the quarterly and annual financial statements and reports. The external auditor or any two members of the Committee may also request a meeting of the Committee. The Chair of the Committee shall hold *in camera* sessions of the Committee, without management present, at every meeting;
- the Chair of the Committee shall preside as chair at each Committee meeting and lead Committee discussion on meeting agenda items;

- the quorum for meetings shall be a majority of the members of the Committee, present in person or by telephone or by other telecommunication device that permits all persons participating in the meeting to hear each other;
- a resolution in writing, signed by all of the members of the Committee, is as valid as if it had been passed at a meeting of the Committee;
- if the Chair of the Committee is not present at any meeting of the Committee, one of the other members of the Committee who is present at the meeting shall be chosen by the Committee to preside at the meeting;
- the Chair shall, in consultation with management and the external auditor, establish the agenda for the meetings and instruct management to circulate properly prepared agenda materials to the Committee with sufficient time for study prior to the meeting;
- every question at a Committee meeting shall be decided by a majority of the votes cast; in the event of a tie vote on any matter, such matter shall be presented to the Board for its consideration and determination;
- the President and Chief Executive Officer, the Executive Vice President and Chief Operating Officer, the Vice President, Finance and Chief Financial Officer and the Controller shall be available to advise the Committee, shall receive notice of meetings and may attend meetings of the Committee at the invitation of the Chair of the Committee. Other management representatives may be invited to attend as necessary; and
- a Committee member, or any other person selected by the Committee, shall be appointed at each meeting to act as secretary for the purpose of recording the minutes of each meeting.

The Committee shall provide the Board with a copy of the minutes of such meetings. Where minutes have not yet been prepared, the Chair shall provide the Board with oral reports on the activities of the Committee. All material information reviewed and discussed by the Committee at any meeting shall be referred to in the minutes and made available for examination by the Board upon request to the Chair.

Responsibilities

The Committee is part of the Board. Its primary functions are to assist the Board in fulfilling its oversight responsibilities with respect to: (i) the oversight, review and approval of the financial statements and the accounting and financial reporting processes of the Corporation; (ii) the assessment of the system of internal controls that management has established; and (iii) the external audit process. In addition, the Committee shall assist the Board, as requested, in fulfilling its oversight responsibilities with respect to: (a) financial policies and strategies; (b) financial risk management practices; and (c) transactions or circumstances which could materially affect the financial profile of the Corporation.

The Committee shall be directly responsible, in its capacity as a committee of the Board, for recommending to the Board the nomination of the external auditor and the compensation and retention of the external auditor and overseeing the work of the external auditor and the relationship of the external auditor with the Corporation (including the resolution of disagreements between management and the external auditor regarding financial reporting).

The Committee should have a clear understanding with the external auditor that they must maintain an open and transparent relationship with the Committee, and that the ultimate accountability of the external auditor is to the shareholders of the Corporation.

Specific Duties

Relationship with External Auditor

The Committee shall:

- consider and make a recommendation to the Board as to the nomination or re-appointment of the external auditor for the purpose of preparing or issuing an auditor's report or performing other audit, review or attest services, ensuring that such auditor is a participant in good standing pursuant to applicable laws;
- consider and make a recommendation to the Board as to the compensation of the external auditor which is to be paid by the Corporation;
- oversee the work of the external auditor in performing their audit, review or attest services and oversee the resolution of any disagreements between management of the Corporation and the external auditor;
- review and discuss with the external auditor all significant relationships that the external auditor and its affiliates have with the Corporation and its affiliates in order to determine the external auditor's independence;
- as may be required by applicable securities laws, rules and guidelines, either:
 - pre-approve all non-audit services to be provided by the external auditor to the Corporation (and its subsidiaries, if any); or
 - adopt specific policies and procedures for the engagement of the external auditor for the purposes of the provision of non-audit services; and
- review and approve the hiring policies of the Corporation regarding partners and employees and former partners and employees of the present and former external auditor of the Corporation.

Financial Statements and Financial Reporting

The Committee shall:

- review with management and the external auditor, and recommend to the Board for approval, the annual and interim financial statements of the Corporation and related annual and interim financial reporting, including management's discussion and analysis and earnings press releases;
- upon completion of each audit, review with the external auditor the results of such audit. This process may include but is not limited to reviewing:
 - the scope and quality of the audit work performed;
 - the capability of the Corporation's financial personnel;
 - the co-operation received from the Corporation's financial personnel during the audit;
 - the internal resources used;
 - significant transactions outside of the normal business of the Corporation; and
 - significant proposed adjustments and recommendations for improving internal accounting controls, accounting principles or management systems;

- review with management and recommend to the Board for approval, any financial statements of the Corporation (excluding proforma financial statements, unless such review is requested by the Board) which have not previously been approved by the Board and which are to be included in a prospectus or other public disclosure document of the Corporation;
- consider and be satisfied that adequate policies and procedures are in place for the review of the Corporation's public disclosure of financial information extracted or derived from the Corporation's financial statements, and periodically assess the adequacy of such procedures; and
- review accounting, tax, legal and financial aspects of the operations of the Corporation as the Committee considers appropriate.

Internal Controls

The Committee shall:

- review with management and the external auditor, the adequacy and effectiveness of the internal control and management information systems and procedures of the Corporation (with particular attention given to accounting, financial statements and financial reporting matters) and determine whether the Corporation is in compliance with applicable legal and regulatory requirements and with the Corporation's policies;
- read the external auditor's recommendations regarding any matters, including internal control and management information systems and procedures, and management's responses thereto; and
- establish procedures for the receipt, retention and treatment of complaints, submissions and concerns regarding accounting, internal controls or auditing matters and the confidential, anonymous submission by employees of concerns regarding questionable accounting or auditing matters.

Financial Risk Management

The Committee may, if requested by the Board, review the appropriateness and effectiveness of the Corporation's policies and business practices which impact on the financial integrity of the Corporation, including those relating to accounting and management reporting. The Committee may, if requested by the Board, also review the financial risks arising from the Corporation's exposure to such things as commodity prices, interest rates, foreign currency exchange rates and credit, the activities of the Corporation's marketing group, the Corporation's insurance program and tax or government audits and report the results of such reviews to the Board for the purpose of assisting the Board in identifying the principal business risks associated with the business of the Corporation.

Review of Terms of Reference

The Corporate Governance and Nominating Committee shall review and reassess the adequacy of these terms of reference annually, and otherwise as it deems appropriate and recommend changes to the Board. Such review shall include the evaluation of the performance of the Committee against criteria defined in the Committee and Board terms of reference.
